Multi- Aperture cores (2873000102)

Part Number: 2873000102

73 MULTI- APERTURE CORE

Explanation of Part Numbers:

- Digits 1 & 2 = Product Class
- − Digits 3 & 4 = Material Grade
- Last digit 2 = Burnished

Multi- aperture cores are used in suppression applications and in balun (balance- unbalance) and other broadband transformers. They are also employed in airbag designs to prevent accidental activation.

All multi- aperture cores are supplied burnished.

Our "Multi- Aperture Core Kit" (part number 0199000036) is available for prototype evaluation.

For any multi- aperture requirement not listed here, feel free to contact our customer service group for availability and pricing.

Weight: 3.5 (g)

| Dim | mm | mm tol | nominal inch | inch misc. |
|-----|------|--------|--------------|------------|
| A | 13.3 | ±0.60 | 0.525 | _ |
| В | 13.4 | ±0.30 | 0.528 | _ |
| C | 7.5 | ±0.35 | 0.295 | _ |
| Е | 5.7 | ±0.25 | 0.225 | _ |
| Н | 3.8 | ±0.25 | 0.15 | |

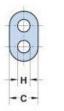

Figure 1

Chart Legend

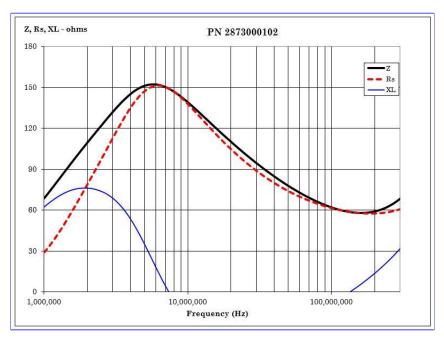

+ Test frequency

| Typical Impeda | nce (Ω) |
|---------------------|---------|
| 10 MHz | 139 |
| 25 MHz ⁺ | 101 |

Multi- aperture cores in 73 and 43 materials are controlled for impedance only. The 61 NiZn material is controlled for both impedance and A_L value. The high frequency 67 material is controlled for A_L value. Minimum impedance values are specified for the + marked frequencies. The minimum impedance is typically the listed impedance less 20%.

Multi- aperture cores in 73 and 43 material are measured for impedance on the E4990A Impedance Analyzer. The 61 and 67 multi- aperture cores are tested on the E4991A / HP4291B Impedance Analyzer. All impedance measurements are performed with a single turn to both holes, using the shortest practical wire length.

The 61 and 67 material multi- hole beads are tested for A_L value. The test frequency is 10 kHz at < 10 gauss. The test winding is five turns wound through both holes.
