

## LOW VOLTAGE 1:18 CLOCK DISTRIBUTION CHIP

**MPC940L**

The MPC940L is a 1:18 low voltage clock distribution chip with 2.5 V or 3.3 V LVC MOS output capabilities. The device features the capability to select either a differential LVPECL or an LVC MOS compatible input. The 18 outputs are 2.5 V or 3.3 V LVC MOS compatible and feature the drive strength to drive 50 Ω series or parallel terminated transmission lines. With output-to-output skews of 150 ps, the MPC940L is ideal as a clock distribution chip for the most demanding of synchronous systems. The 2.5 V outputs also make the device ideal for supplying clocks for a high performance microprocessor based design. For a similar device at a lower price/performance point, the reader is referred to the MPC9109.

- LVPECL or LVC MOS Clock Input
- 2.5 V LVC MOS Outputs for Pentium II Microprocessor Support
- 150 ps Maximum Output-to-Output Skew
- Maximum Output Frequency of 250 MHz
- 32-Lead LQFP Packaging
- 32-Lead Pb-Free Package Available
- Dual or Single Supply Device:
  - Dual  $V_{CC}$  Supply Voltage, 3.3 V Core and 2.5 V Output
  - Single 3.3 V  $V_{CC}$  Supply Voltage for 3.3 V Outputs
  - Single 2.5 V  $V_{CC}$  Supply Voltage for 2.5 V I/O

With a low output impedance ( $\approx 20 \Omega$ ), in both the HIGH and LOW logic states, the output buffers of the MPC940L are ideal for driving series terminated transmission lines. With a  $20 \Omega$  output impedance the 940L has the capability of driving two series terminated lines from each output. This gives the device an effective fanout of 1:36. If a lower output impedance is desired please see the MPC942 data sheet.

The differential LVPECL inputs of the MPC940L allow the device to interface directly with a LVPECL fanout buffer like the MC100EP111 to build very wide clock fanout trees or to couple to a high frequency clock source. The LVC MOS input provides a more standard interface for applications requiring only a single clock distribution chip at relatively low frequencies. In addition, the two clock sources can be used to provide for a test clock interface as well as the primary system clock. A logic HIGH on the LVC MOS\_CLK\_SEL pin will select the LVC MOS level clock input. All inputs of the MPC940L have internal pullup/pulldown resistors so they can be left open if unused.

The MPC940L is a single or dual supply device. The device power supply offers a high degree of flexibility. The device can operate with a 3.3 V core and 3.3 V output, a 3.3 V core and 2.5 V outputs as well as a 2.5 V core and 2.5 V outputs. The 32-lead LQFP package was chosen to optimize performance, board space and cost of the device. The 32-lead LQFP has a 7x7 mm body size with a conservative 0.8 mm pin spacing.

## PACKAGE DIMENSIONS

## NOTES:

1. DIMENSIONS ARE IN MILLIMETERS.
2. INTERPRET DIMENSIONS AND TOLERANCES PER ASME Y14.5-1994.

- 3. DATUMS A, B, AND D TO BE DETERMINED AT DATUM PLANE H.
- 4. DIMENSIONS TO BE DETERMINED AT SEATING PLANE DATUM C.
- 5. DIMENSION DOES NOT INCLUDE DAMBAR PROTRUSION. ALLOWABLE DAMBAR PROTRUSION SHALL NOT CAUSE THE LEAD WIDTH TO EXCEED THE MAXIMUM DIMENSION BY MORE THAN 0.08 MM. DAMBAR CANNOT BE LOCATED ON THE LOWER RADIUS OR THE FOOT. MINIMUM SPACE BETWEEN PROTRUSION AND ADJACENT LEAD OR PROTRUSION: 0.07 MM.
- 6. DIMENSIONS DO NOT INCLUDE MOLD PROTRUSION. ALLOWABLE PROTRUSION IS 0.25 MM PER SIDE. DIMENSIONS ARE MAXIMUM PLASTIC BODY SIZE DIMENSIONS INCLUDING MOLD MISMATCH.
- 7. EXACT SHAPE OF EACH CORNER IS OPTIONAL.
- 8. THESE DIMENSIONS APPLY TO THE FLAT SECTION OF THE LEAD BETWEEN 0.1 MM AND 0.25 MM FROM THE LEAD TIP.
