

## IR2184(4)(S) & (PbF)

### HALF-BRIDGE DRIVER

#### Features

- Floating channel designed for bootstrap operation  
Fully operational to +600V  
Tolerant to negative transient voltage  
dV/dt immune
- Gate drive supply range from 10 to 20V
- Undervoltage lockout for both channels
- 3.3V and 5V input logic compatible
- Matched propagation delay for both channels
- Logic and power ground +/- 5V offset.
- Lower di/dt gate driver for better noise immunity
- Output source/sink current capability 1.4A/1.8A
- Also available LEAD-FREE (PbF)

#### Packages

#### Description

The IR2184(4)(S) are high voltage, high speed power MOSFET and IGBT drivers with dependent high and low side referenced output channels. Proprietary HVIC and latch immune CMOS technologies enable ruggedized monolithic construction. The logic input is compatible with standard CMOS or LSTTL output, down to 3.3V logic. The output drivers feature a high pulse current buffer stage designed for minimum driver cross-conduction. The floating channel can be used to drive an N-channel power MOSFET or IGBT in the high side configuration which operates up to 600 volts.

#### IR2181/IR2183/IR2184 Feature Comparison

| Part | Input logic | Cross-conduction prevention logic | Dead-Time          | Ground Pins | Ton/Toff   |
|------|-------------|-----------------------------------|--------------------|-------------|------------|
| 2181 | HIN/LIN     | no                                | none               | COM         | 180/220 ns |
| 2184 |             |                                   |                    | VSS/COM     |            |
| 2183 | HIN/LIN     | yes                               | Internal 500ns     | COM         | 180/220 ns |
| 2184 |             |                                   | Program 0.4 ~ 5 us | VSS/COM     |            |
| 2184 | IN/SD       | yes                               | Internal 500ns     | COM         | 680/270 ns |
| 2184 |             |                                   | Program 0.4 ~ 5 us | VSS/COM     |            |

#### Typical Connection

## Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are absolute voltages referenced to COM. The thermal resistance and power dissipation ratings are measured under board mounted and still air conditions.

| Symbol     | Definition   | Min.           | Max.           | Units            |
|------------|--|----------------|----------------|------------------|
| $V_B$      | High side floating absolute voltage                      | -0.3           | 625            | V                |
| $V_S$      | High side floating supply offset voltage                 | $V_B - 25$     | $V_B + 0.3$    |                  |
| $V_{HO}$   | High side floating output voltage                        | $V_S - 0.3$    | $V_B + 0.3$    |                  |
| $V_{CC}$   | Low side and logic fixed supply voltage                  | -0.3           | 25             |                  |
| $V_{LO}$   | Low side output voltage                                  | -0.3           | $V_{CC} + 0.3$ |                  |
| DT         | Programmable dead-time pin voltage (IR21844 only)        | $V_{SS} - 0.3$ | $V_{CC} + 0.3$ |                  |
| $V_{IN}$   | Logic input voltage (IN & $\bar{SD}$ )                   | $V_{SS} - 0.3$ | $V_{SS} + 10$  |                  |
| $V_{SS}$   | Logic ground (IR21844 only)                              | $V_{CC} - 25$  | $V_{CC} + 0.3$ |                  |
| dVS/dt     | Allowable offset supply voltage transient                | —              | 50             | V/ns             |
| $P_D$      | Package power dissipation @ $T_A \leq +25^\circ\text{C}$ | (8-lead PDIP)  | —              | 1.0              |
|            |  | (8-lead SOIC)  | —              | 0.625            |
|            |  | (14-lead PDIP) | —              | 1.6              |
|            |  | (14-lead SOIC) | —              | 1.0              |
| $R_{thJA}$ | Thermal resistance, junction to ambient                  | (8-lead PDIP)  | —              | 125              |
|            |  | (8-lead SOIC)  | —              | 200              |
|            |  | (14-lead PDIP) | —              | 75               |
|            |  | (14-lead SOIC) | —              | 120              |
| $T_J$      | Junction temperature                                     | —              | 150            | $^\circ\text{C}$ |
| $T_S$      | Storage temperature                                      | -50            | 150            |                  |
| $T_L$      | Lead temperature (soldering, 10 seconds)                 | —              | 300            |                  |

## Recommended Operating Conditions

The input/output logic timing diagram is shown in figure 1. For proper operation the device should be used within the recommended conditions. The  $V_S$  and  $V_{SS}$  offset rating are tested with all supplies biased at 15V differential.

| Symbol   | Definition  | Min.       | Max.         | Units            |
|----------|---|------------|--------------|------------------|
| $V_B$    | High side floating supply absolute voltage        | $V_S + 10$ | $V_S + 20$   | V                |
| $V_S$    | High side floating supply offset voltage          | Note 1     | 600          |                  |
| $V_{HO}$ | High side floating output voltage                 | $V_S$      | $V_B$        |                  |
| $V_{CC}$ | Low side and logic fixed supply voltage           | 10         | 20           |                  |
| $V_{LO}$ | Low side output voltage                           | 0          | $V_{CC}$     |                  |
| $V_{IN}$ | Logic input voltage (IN & $\bar{SD}$ )            | $V_{SS}$   | $V_{SS} + 5$ |                  |
| DT       | Programmable dead-time pin voltage (IR21844 only) | $V_{SS}$   | $V_{CC}$     |                  |
| $V_{SS}$ | Logic ground (IR21844 only)                       | -5         | 5            |                  |
| $T_A$    | Ambient temperature                               | -40        | 125          | $^\circ\text{C}$ |

Note 1: Logic operational for  $V_S$  of -5 to +600V. Logic state held for  $V_S$  of -5V to  $-V_{BS}$ . (Please refer to the Design Tip DT97-3 for more details).

Note 2: IN and SD are internally clamped with a 5.2V zener diode.

## Dynamic Electrical Characteristics

V<sub>BIAS</sub> (V<sub>CC</sub>, V<sub>BS</sub>) = 15V, V<sub>SS</sub> = COM, C<sub>L</sub> = 1000 pF, T<sub>A</sub> = 25°C, DT = V<sub>SS</sub> unless otherwise specified.

| Symbol            | Definition   | Min. | Typ. | Max. | Units | Test Conditions             |
|-------------------|--|------|------|------|-------|-----------------------------|
