

## **Filterless High Efficiency 1.5W Class D Mono Amplifier**

The ISL99201 is a fully integrated high efficiency class-D mono amplifier. It is designed to maximize performance for mobile phone applications. The application circuit requires a minimum requirement of external components and operates from a 2.4V to 5.5V input supply. It is capable of delivering 1.4W of continuous output power with less than 1% THD+N driving a 8W load from a 5V supply.

The ISL99201 features a high-efficiency, low-noise modulation scheme. It operates with 86% efficiency at 400mW into 8W and has a signal-to-noise ratio (SNR) that is better than 95dB. The ISL99201 has a micro-power shutdown mode with a typical shutdown current of 200nA. Shutdown is enabled by applying a logic low to the SD pin.

The architecture of the devices allows it to achieve very low level of pop-and-click. This minimizes voltage glitches at the output during turn-on and turn-off, thus reducing audible noise on activation and deactivation.

The fully differential input of the ISL99201 provides excellent rejection of common mode noise on the input typically 75dB. EMI suppression is achieved by SRC (Slew Rate Control).

The ISL99201 oscillator can be synchronized to an external clock through the SYNC input, allowing the switching frequency to be externally defined. The SYNC input also allows multiple ISL99201 to be cascaded and frequency locked; minimizing interference due to clock intermodulation.

The ISL99201 also has excellent rejection of power supply noise, including noise caused by GSM transmission bursts and RF rectification. PSRR is typically 75dB at 217Hz. There will be 4 versions of the part; they will consist of three fixed gain settings (6dB, 9.6dB, 12dB) and one user programmable gain setting (need external resistors).

The ISL99201 has built-in thermal shutdown and output short-circuit protection.

## **Features**

- Filterless class D with efficiency > 86% at 400mW
- Click-pop suppression
- Slew rate control
- Spread spectrum switching
- Optional SYNC pin for master/slave operation without interface
- 1.4W into 8W with less than 1% THD+N
- 2.4V to 5.5V single supply voltage
- Built-in resistors to reduce board component count
- Only one external component required (Fixed gain mode)
- Short circuit and thermal protection
- Gain programmable 6dB, 9.6dB, 12dB and User programmable
- Pb-Free (RoHS compliant)

## **Applications**

- Mobile phones
- MP3 players
- Portable gaming
- Portable electronics
- Educational toys

### NOTES:

1. Please refer to [TB347](#) for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-20.

## Pinout

ISL99201  
(8 LD TDFN)  
TOP VIEW

**Absolute Maximum Ratings (Reference to GND)**

Supply Voltage ..... -0.3V to 6V  
 Input Voltage ..... -0.3V to  $V_{DD}+0.3V$

**Recommended Operating Conditions**

Ambient Temperature Range ..... -40°C to +85°C  
 Operating Supply Voltage ( $V_{DD}$  Pin) ..... 2.4V to 5.5V

**Thermal Information**

Thermal Resistance (Typical Note 3)  $\theta_{JA}$  (°C/W)  
 TDFN Package ..... 53  
 Maximum Junction Temperature (Plastic Package) -65°C to +150°C  
 Maximum Storage Temperature Range ..... -65°C to +150°C  
 Power Dissipation Ratings  
 8 Ld 3x3 TDFN  
 Derating Factor ..... 21.8mW/°C  
 Power Ratings  
 $T_A = +25^\circ\text{C}$  ..... 2.7W  
 $T_A = +70^\circ\text{C}$  ..... 1.7W  
 $T_A = +85^\circ\text{C}$  ..... 1.4W  
 Pb-Free Reflow Profile ..... see link below  
<http://www.intersil.com/pbfree/Pb-FreeReflow.asp>

CAUTION: Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

**NOTE:**

3.  $\theta_{JA}$  is measured in free air with the component mounted on a high effective thermal conductivity test board with “direct attach” features. See Tech Brief [TB379](#)

**Electrical Specifications** Typical Values Are Tested at  $V_{DD} = 5V$  and the Ambient Temperature at +25°C.

PARAMETER	SYMBOL	TEST CONDITIONS	MIN (Note 5)	TYP	MAX (Note 5)	UNITS
Output Power	$P_O$	$R_L = 8\Omega$ , THD = 10%, $f = 1\text{kHz}$ , 20kHz BW, $V_{DD} = 5.0V$		1.4		W
		$R_L = 8\Omega$ , THD = 10%, $f = 1\text{kHz}$ , 20kHz BW, $V_{DD} = 3.6V$		0.75		W
		$R_L = 8\Omega$ , THD = 10%, $f = 1\text{kHz}$ , 20kHz BW, $V_{DD} = 2.5V$		0.4		W
		$R_L = 8\Omega$ , THD = 1%, $f = 1\text{kHz}$ , 20kHz BW, $V_{DD} = 5.0V$		1.15		W
Efficiency	$\eta$	$P_{OUT} = 1.4W$ , $8\Omega + 33\mu H$ , $V_{DD} = 5.0V$		90		%

## NOTES:

- Limits established by Characterization and are not production tested
- Parameters with MIN and/or MAX limits are 100% tested at  $+25^{\circ}C$ , unless otherwise specified. Temperature limits established by characterization and are not production tested.

## Pin Descriptions

### SD

Shutdown Active Low. This signal is used to shut down and activate the part. It is 1.8V to 5V compatible. During shutdown, the part draws less than 100nA input current. Coming out of shutdown takes 3.5ms and going into shutdown is instantaneous.

### SYNC

External clock input. This pin allows the chip to be synchronized to a system clock. This helps in folding the spectral components and the switching harmonic out of band of interest. The range of SYNC frequency is from 250kHz to 800kHz.

### IN+

Positive Differential Input.

### IN-

Negative Differential Input.

### VO+

Positive BTL output.

### GND

Ground.

### VDD

Power Supply.

### VO-

Negative BTL output.

## Block Diagram (Notes)

Notes:

Gain = 6dB, 9.6dB, 12dB (gain setting)

Gain =  $\frac{140k\Omega}{(R_i + 5k\Omega)}$ ; with external resistor
