

General Purpose Metallized Polyester Film Capacitors

F622, 5 mm Lead Spacing, 50 – 630 VDC

Overview

The F622 is constructed of metalized stacked polyester film capacitor with radial leads of tinned wire. Radial leads are electrically welded to the contact metal layer on the ends of the capacitor winding. The capacitor is encapsulated in a self-extinguishing material meeting the requirements of UL 94V-0.

Applications

Typical applications include high performance, high temperature blocking, coupling, decoupling, bypassing, and interference suppression in low voltage applications such as automotive. Not for use with the mains.

Benefits

- Voltage range: 50 – 630 VDC
- Capacitance range: 0.001 – 2.2 μ F
- Lead spacing: 5 mm
- Capacitance tolerance: $\pm 10\%$, $\pm 20\%$, $\pm 5\%$ on request
- Climatic category: 55/125/56
- Tape & Reel packaging in accordance with IEC 60286-2
- RoHS compliant and lead-free terminations
- Operating temperature range of -55°C to $+125^{\circ}\text{C}$
- Designed for high performance and high temperature applications

Part Number System

F	622	J	F	104	M	050	C
Capacitor Class	Series	Lead Spacing (mm)	Size Code	Capacitance Code (pF)	Capacitance Tolerance	Rated Voltage (VDC)	Packaging
F = Film	Metallized polyester	J = 5	See Dimension Table	First two digits represent significant figures. Third digit specifies number of zeros.	J = $\pm 5\%$ K = $\pm 10\%$ M = $\pm 20\%$	050 = 50 063 = 63 100 = 100 250 = 250 400 = 400 500 = 500 630 = 630	See Ordering Options Table

Ordering Options Table

Lead Spacing Nominal (mm)	Type of Leads and Packaging	Lead Length (mm)	Lead and Packaging Code
5	Standard lead and packaging options:		
	Bulk (bag) – short leads	4 +2/-0	C
	Bulk (bag) – long leads	17 +0/-1	A
	Tape & Reel (standard reel)	$H_0 = 18.5 \pm 0.5$	L
	Other lead and packaging options:		
	Bulk (bag) – maximum length leads	20 +5/-0	ALL0L
	Ammo pack	$H_0 = 18.5 \pm 0.5$	R

Dimensions – Millimeters

Note: See Ordering Options Table for lead length (LL) options.										

Performance Characteristics

Capacitance tolerance	$\pm 20\%$, $\pm 10\%$, $\pm 5\%$ on request			
Temperature range	-55°C to 125°C			
Voltage derating	Above $+85^{\circ}\text{C}$ DC and AC voltage derating is $1.25\%/^{\circ}\text{C}$			
Rated temperature	$+85^{\circ}\text{C}$			
Climatic category	-55 to $+125^{\circ}\text{C}$			
	Average relative humidity $\leq 75\%$			
	RH = 95% for 30 days per year			
	RH = 85% for further days limited by average value per year			
Test voltage	$1.4 \times V_R$ VDC for 2 seconds			
Capacitance drift	Maximum 3% after a two year storage period at a temperature of $+10^{\circ}\text{C}$ to $+40^{\circ}\text{C}$ and a relative humidity of 40% to 60%			
Reliability	Operational life $> 200,000$ hours			
	Failure rate < 3 FIT, $T = +40^{\circ}\text{C}$, $V = 0.5 \times V_R$			
	Failure criteria: open circuit, short circuit, cap change $> 10\%$, DF two times the catalog limits, IR $< 50 \text{ M}\Omega$			
Maximum pulse steepness	dv/dt according to article table. For peak to peak voltages lower than rated voltage ($V_{pp} < V_R$), the specified dv/dt can be multiplied by the factor V_R/V_{pp}			
Temperature coefficient	$+400 (\pm 200)$ ppm/ $^{\circ}\text{C}$ at 1 kHz			
Self inductance	Approximately 6 nH/cm for the total length of capacitor winding and the leads			
Dissipation factor $\tan\delta$	Maximum Values at $+23^{\circ}\text{C}$			
		$C \leq 0.1 \mu\text{F}$	$0.1 \mu\text{F} < C \leq 1.0 \mu\text{F}$	$C > 1.0 \mu\text{F}$
Lead spacing 5 mm	1 kHz	0.8%	0.8%	0.8%
	10 kHz	1.2%	1.2%	1.5%
	100 kHz	2.5%		
Insulation resistance	Measured at $+20^{\circ}\text{C}$, according to IEC 60384-2			
	Minimum Values Between Terminals			
		$C \leq 0.33 \mu\text{F}$	$C > 0.33 \mu\text{F}$ and $< 1 \mu\text{F}$	$C > 1.0 \mu\text{F}$
	$V_R \leq 100 \text{ VDC}$	$15,000 \text{ M}\Omega$	$5,000 \text{ M}\Omega \cdot \mu\text{F}$	$1,000 \text{ M}\Omega \cdot \mu\text{F}$
	$V_R > 100 \text{ VDC}$	$30,000 \text{ M}\Omega$	$10,000 \text{ M}\Omega \cdot \mu\text{F}$	

Maximum Voltage (V_{rms}) vs. Frequency (sinusoidal wave-form/ $T_h \leq 40^\circ\text{C}$)

Lead spacing 5 mm

Maximum Current (I_{rms}) vs. Frequency (sinusoidal wave-form/ $T_h \leq 40^\circ\text{C}$)

Lead spacing 5 mm

Environmental Test Data

Damp Heat Test	Test Conditions	T = +40°C, RH = 93%, t = 56 days
	Test Criteria	$\Delta C/C \leq \pm 5\%$ $\Delta \tan \delta \leq 0.005$ (1 kHz) IR after test 0.5 x IR minimum
Endurance Test	Test Conditions	T = +100°C, U = 1.25 x (0.8 x U _R)
	Test Criteria	t = 2,000 hours $\Delta C/C \leq \pm 5\%$ $\Delta \tan \delta \leq 0.005$ (1 kHz) $\Delta \tan \delta \leq 0.010$ (100 kHz) IR after test 0.5 x IR minimum

Environmental Compliance

All KEMET MKT capacitors are RoHS compliant and halogen-free.

(1) K = ±10%, M = ±20%, J = ±5% on request.

(2) Insert lead and packaging code. See table for available options.

Soldering Process

The implementation of the RoHS directive has resulted in the selection of SnAuCu (SAC) alloys or SnCu alloys as primary solder. This has increased the liquidus temperature from that of 183°C for SnPb eutectic alloy to 217 – 221°C for the new alloys. As a result, the heat stress to the components, even in wave soldering, has increased considerably due to higher pre-heat and wave temperatures. Polypropylene capacitors are especially sensitive to heat (the melting point of polypropylene is 160 – 170°C). Wave soldering can be destructive, especially for mechanically small polypropylene capacitors (with lead spacing of 5 – 15 mm), and great care has to be taken during soldering. In general, the wave soldering curve from IEC Publication 61760-1 Edition 2 serves as a solid guideline for successful soldering. Please see Figure 1. The recommended solder profiles from KEMET should be used. Please consult KEMET with any questions.

Reflow soldering is not recommended for through-hole film capacitors. Exposing capacitors to a soldering profile in excess of the above the recommended limits may result to degradation or permanent damage to the capacitors.

Do not place the polypropylene capacitor through an adhesive curing oven to cure resin for surface mount components. Insert through-hole parts after the curing of surface mount parts. Consult KEMET to discuss the actual temperature profile in the oven, if through-hole components must pass through the adhesive curing process. A maximum two soldering cycles is recommended. Please allow time for the capacitor surface temperature to return to a normal temperature before the second soldering cycle.

Manual Soldering Recommendations

Following is the recommendation for manual soldering with a soldering iron.

Soldering iron tip temperature should be set at 350°C (+10°C maximum) with the soldering duration not to exceed more than three seconds.

Wave Soldering Recommendations

Soldering Process cont.

Wave Soldering Recommendations cont.

1. The table indicates the maximum set-up temperature of the soldering process
Figure 1

Dielectric Film Material	Maximum Preheat Temperature			Maximum Peak Soldering Temperature	
	Capacitor pitch ≤ 10 mm	Capacitor pitch = 15 mm	Capacitor pitch > 15 mm	Capacitor pitch ≤ 15 mm	Capacitor pitch > 15 mm
Polyester	130°C	130°C	130°C	270°C	270°C
Polypropylene	110°C	110°C	130°C	260°C	270°C
Paper	130°C	130°C	140°C	270°C	270°C
Polyphenylene Sulphide	150°C	150°C	160°C	270°C	270°C

2. The maximum temperature measured inside the capacitor:
Set the temperature so that inside the element the maximum temperature is below the limit:

Dielectric Film Material	Maximum temperature measured inside the element
Polyester	160°C
Polypropylene	110°C
Paper	160°C
Polyphenylene Sulphide	160°C

Temperature monitored inside the capacitor.

Selective Soldering Recommendations

Selective dip soldering is a variation of reflow soldering. In this method, the printed circuit board with through-hole components to be soldered is preheated and transported over the solder bath as in normal flow soldering without touching the solder. When the board is over the bath, it is stopped, and pre-designed solder pots are lifted from the bath with molten solder only at the places of the selected components and pressed against the lower surface of the board to solder the components.

The temperature profile for selective soldering is similar to the double wave flow soldering outlined in this document; **however, instead of two baths, there is only one bath with a time of 3 to 10 seconds.** In selective soldering, the risk of overheating is greater than in double wave flow soldering, and great care must be taken so that the parts are not overheated.

Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicated or that other measures may not be required.
