

TDKEZWIFI - EZ Web Lynx Wi-Fi

EZ Web Lynx WiFi Module enables engineers to quickly add wireless monitoring and control capability to any application. It features digital I/O and analog inputs, I2C and serial interfaces, PWM and timer channels for sensing and control.

EZ Web Lynx serves dynamic web pages for monitoring and control. It can also send email notifications of event driven alarms and/or daily status. CCS developed firmware provides control of all module I/O through custom HTML tags, enabling users to develop their software completely in HTML.

The EZ Web Lynx IDE (available by download) allows you to quickly develop custom dynamic web pages and send alarm status emails simply by programming in HTML. The IDE features an HTML editor and simulator to speed up development and testing of the served website. Complete documentation includes design examples for temperature monitoring, using conditional HTML tags and controlling pin I/O.
