

Precision 2.5-Volt Reference

Description

The SG1503 is a monolithic integrated circuit implementing a self-contained precision voltage reference generator. It is internally trimmed for $\pm 1\%$ accuracy and requires less than 2mA quiescent current. SG1503 can deliver greater than 10mA output current while achieving total load and line induced tolerances of less than 0.5%.

In addition to voltage accuracy, internal trimming achieves a temperature coefficient of output voltage of typically 10 ppm/ $^{\circ}\text{C}$. As a result, these references are excellent choices for applications in critical instrumentation and D-to-A converter systems. The SG1503 is specified for operation over the full military ambient temperature range of -55°C to 125°C , while the SG2503 is designed for -25°C to 85°C and the SG3503 for commercial applications of 0°C to 70°C .

Electrical Characteristics

(Unless otherwise specified, these specifications apply over the operating ambient temperatures for SG1503 with $-55^{\circ}\text{C} \leq T_A \leq 125^{\circ}\text{C}$, SG2503/SG3503 with $0^{\circ}\text{C} \leq T_A \leq 70^{\circ}\text{C}$, $V_{IN} = 15\text{V}$, and $I_L = 0\text{mA}$. Low duty cycle pulse testing techniques are used that maintains junction and case temperatures equal to the ambient temperature.)
