## NTE7211 & NTE7212 Integrated Circuit Class AB Audio Power Amplifier, 2 Channel

### Description:

The NTE7211 and NTE7212 are audio power amplifier hybrid integrated circuits in a 15-Lead SIP type package consisting of optimally-designed discrete component power amplifier circuits.

### Features:

- Miniature Package
- Available in 2 Different Outputs (THD = 0.4%, f = 20Hz to 20kHz):
  - 50W/Ch (NTE7211)
  - 80W/Ch (NTE7212)
- Output Load Impedance:  $R_L = 6\Omega$
- Allowable Load Shorted Time: 0.3 seconds
- Supports the Use of Standby, Muting, and Load Shorting Protection Circuits

Note 2. Unless otherwise noted, use a constant-voltage supply for the power supply used during inspection.

Note 3. The output noise voltage values shown are peak values read with a VTM. However, an AC stabilized (50Hz) power supply should be used to minimize the influence of AC primary side flicker noise on the reading.
