# General Purpose Relay

- Ideally suited for high-inrush fluid pump controls: pool/spa, water processing, emergency, chemical industry, etc.
- High-capacity, high-withstand voltage relay with no contact chattering for momentary voltage drops up to 50% of rated voltage.
- UL Class B construction standard.
- Wide-range AC-activated coil that handles 100 to 120 VAC at either 50 or 60 Hz.
- Miniature hinge for maximum switching capacity, particularly for inductive loads.
- Flame resistant materials (UL94V-0-qualifying) used for all insulation material.
- Quick-connect, screw, and PCB terminals available.
- Standard models are UL, CSA, and TUV approved; VDE/IEC 950 versions are now available. Meet pollution degree 3, Material Group II & III.

## **Ordering Information**

To Order: Select the part number and add the desired coil voltage rating (e.g., G7L-1A-T-CB-AC100/120).

Туре	Contact form	Model

## ■ Coil Internal Circuit

### DC operating coil

## ■ Coil Data

### AC

Rated voltage	Rated current	Resistance	Must operate	Must release	Max. voltage	Power consumption				
(V)	(mA)	(Ω)		% of rated voltage						
6	283	18.90	75% max.	15% min.	110% max.	Approx.1.70				
12	142	75				to 2.50 VA				
24	71	303								
50	34	1,310								
100/120	17.00/20.40	5,260	75 volts	18 volts	132 volts					
200/240	8.50/10.20	21,000	150 volts	36 volts	264 volts					

### DC

Rated voltage	Rated current	Resistance	Must operate	Must release	Max. voltage	Power consumption					
(V)	(mA)	(Ω)		% of rated voltage							
6	317	18.90	75% max.	15% min.	110% max.	Approx.1.90 W					
12	158	75									
24	79	303									
48	40	1,220									
100	19	5,260									

Note: 1. The rated current and coil resistance are measured at a coil temperature of 23°C (73°F) with tolerances of +15%/-20% for AC rated current and ±15% for DC coil resistance.

2. Performance characteristic data are measured at a coil temperature of 23  $^{\circ}\text{C}$  (73  $^{\circ}\text{F}$ ).

## ■ Characteristics

Contact resistance		50 mΩ max.					
Operate time		30 ms max.					
Release time		30 ms max.					
Max. operating	Mechanical	1,800 operations/hour					
frequency	Electrical	1,800 operations/hour (under rated load)					
Insulation resistand	ce	1,000 MΩ min. (at 500 VDC)					
Dielectric strength		4,000 VAC, min./5,000 VAC typical, 50/60 Hz for 1 minute between coil and contacts					
		2,000 VAC, 50/60 Hz for 1 minute between contacts of same pole					
		2,000 VAC, 50/60 Hz for 1 minute between contacts of different poles (DPST-NO type)					
Impulse withstand	voltage	Between coil and contact: 10,000 V min./12,000 V typ. (impulse wave used: 1.20 x 50 µs)					
Vibration	Mechanical durability	10 to 55 Hz; 1.50 mm (0.06 in) double amplitude					
	Malfunction durability	10 to 55 Hz; 1.50 mm (0.06 in) double amplitude					
Shock	Mechanical durability	1,000 m/s² (approx. 100 G)					
	Malfunction durability	1,000 m/s <sup>2</sup> (approx.10 G)					
Life expectancy	Mechanical	1,000,000 operations min. (at 1,800 operations/hour)					
	Electrical	100,000 operations min. (at 1,800 operations/hour under rated load 250,000 ops typical)					
Ambient temperatu	re	-25° to 60°C (-13° to 140°F)					
Humidity		35% to 85% RH					
Weight		Quick-connect terminal type: approx. 90 g (3.17 oz)					
		PCB terminal type: approx. 100 g (3.52 oz)					
		Screw terminal type: approx. 120 g (4.23 oz)					

Note: Data shown are of initial value.

### VDE recognized type (Licence no. 1530 UG)

Note: 1. Please consult OMRON for details of VDE approvals.2. The G7L relay conforms to the following standards:

Electrical safety: DIN IEC 255 Teil 1-00/DIN VDE 0435 Teil 201/05. 83 DIN VDE 0435 Teil 201 A1/05. 90 DIN IEC 255 Teil 0-20/DIN VDE 0435 Teil 120/10. 81 DIN EN 60 950/VDE 0805/11. 93

prEN 50082-2, EN 55022

3. The rated values approved by each of the safety standards (e.g., UL and CSA) may be different from the performance characteristics individually defined in this catalog.

EMC:

- 4. In the interest of product improvement, specifications are subject to change.
- 5. Suffix T130 rated at  $130^{\circ}C$
- 6. Pollution degree 3, Material Group II & III.
- 7. CE marking is provide only on non-PCB terminal versions.

## Precautions

## Handling

- To preserve initial performance, do not drop or otherwise subject the power relay to shock.
- The case is not designed to be removed during normal handling and operation. Doing so may affect performance.
- Use the power relay in a dry environment free from excessive dust, SO\_2, H\_2S, or organic gas.
- Do not allow a voltage greater than the maximum allowable coil voltage to be applied continuously.
- Do not use the power relay outside of specified voltages and currents.
- Do not allow the ambient operating temperature to exceed the specified limit.

## Installation

- Although there are not specific limits on the installation site, it should be as dry and dust-free as possible.
- PCB terminal-equipped relays weigh approximately 100 g. Be sure that the PCB is strong enough to support them. We recommend dual-side through-hole PCBs to reduce solder cracking from heat stress.
- Quick-connect terminals can be connected to fast on receptacle #250 and positive-lock connectors.
- Allow suitable slack on leads when wiring, and do not subject the terminals to excessive force.

## ■ Cleaning PCB Terminals

 PCB terminals have semi-sealed construction which prevents flux from entering the relay base. It is recommended that the user should apply a tape seal over the vent hole prior to wave soldering or cleaning. The tape should then be removed after processing.

## ■ Applications

- Compressors for package air conditioners and heater switching controllers
- Switching controllers for power tools or motors
- Power controllers for water heaters
- Power controllers for dryers
- Lamp control, motor drivers, and power supply switching in copy machines, facsimiles, and other OA equipment
- Lighting controllers
- · Power controllers for packers or food processing equipment
- Magnetron control in microwaves

## ■ Operating Coil

• As a rule, either a battery or a DC power supply with a maximum 5% ripple is used for the operating voltage for DC relays. Before using a rectified AC supply, confirm that the ripple is not greater than 5%. Ripple greater than this can lead to variations in the operating and reset voltages.

As excessive ripple can generate beats, the insertion of a smoothing capacitor is recommended as shown below.

E max: Max. ripple E min: Min. ripple E mean: Mean DC value

- When driving a transistor, check the leakage current and connect a bleeder resistor if necessary.
- Momentary voltage drops on coil input voltage should not exceed one second duration after contact mating with no shock or vibration.
