LM4934 Boomer™ Audio Power Amplifier Series 3D Audio Sub-System with Stereo Speaker, OCL/SE Stereo Headphone, Earpiece and Mono Line Level Outputs

Check for Samples: LM4934

FEATURES

- **18-bit Stereo DAC**
- **Multiple Distinct Output Modes**
- **Stereo Speaker Amplifier**
- **Stereo Headphone Amplifier**
- **Mono Earpiece Amplifier**
- **Mono Line Output for External Handsfree Carkit**
- **Independent Left, Right, Headphone and Mono Speaker Volume Controls**
- **Texas Instruments 3D Enhancement with Programmable Effect Level**
- **I^2C/SPI (Selectable) Compatible Interface**
- **Ultra Low Shutdown Current**
- **Click and Pop Suppression Circuit**

APPLICATIONS

- **Cell Phones**
- **PDAs**

KEY SPECIFICATIONS

- **P_{OUT}, Stereo BTL, 8Ω, 3.3V, 1% THD+N, 520mW (Typ)**
- **P_{OUT} HP, 32Ω, 3.3V, 1% THD+N, 36mW (Typ)**
- **P_{OUT} Mono Earpiece, 32Ω, 3.3V, 1% THD+N, 55mW (Typ)**
- **Shutdown Current, 0.6µA (Typ)**
- **DAC SNR, 95dB (Typ)**

DESCRIPTION

The LM4934 is an integrated audio sub-system designed for stereo cell phone applications. Operating on a 3.3V supply, it combines a stereo speaker amplifier delivering 520mW per channel into an 8Ω load, a stereo headphone amplifier delivering 36mW per channel into a 32Ω load, a mono earpiece amplifier delivering 55mW into a 32Ω load, and a line output for an external powered handsfree speaker. It integrates the audio amplifiers, volume control, mixer, power management control, and Texas Instruments 3D enhancement all into a single package. In addition, the LM4934 routes and mixes the stereo and mono inputs into multiple distinct output modes. The LM4934 features an I2S serial interface for full range audio and an I2C/SPI compatible interface for control.

Boomer audio power amplifiers are designed specifically to provide high quality output power with a minimal amount of external components.

PIN FUNCTIONS

PIN	PIN NAME	D/A	I/O	DESCRIPTION
A1	DGND	D	P	DIGITAL GROUND
A2	MCLK	D	I	MASTER CLOCK
A3	I2S_WS	D	I/O	I2S WORD SELECT
A4	GPIO	D	O	TEST PIN (MUST BE LEFT FLOATING)
A5	ADDR/ENB	D	I	I2C_ADDR OR SPI_ENB DEPENDING ON I2C or SPI MODE SELECT
A6	DVDD	D	P	DIGITAL SUPPLY VOLTAGE
B1	PLLVDD	D	P	PLL SUPPLY VOLTAGE
B2	I2S_SDI	D	I	I2S SERIAL DATA INPUT
B3	I2S_CLK	D	I/O	I2S CLOCK SIGNAL
B4	MODE	D	I	SELECTS BETWEEN SPI AND I2C CONTROL INTERFACE
B5	I2C_VDD	D	P	I2C SUPPLY VOLTAGE
B6	VDDIO	D	P	I/O SUPPLY VOLTAGE
C1	PLL_IN	D	I	PLL FILTER INPUT
C2	PLL_OUT	D	O	PLL FILTER OUTPUT
C3	PLLGND	D	P	PLL GND
C4	SDA/SDI	D	I/O	I2C SDA OR SPI SDI
C5	SCL/SCK	D	I	I2C_SCL OR SPI_SCK
C6	AVDD	A	P	ANALOG SUPPLY VOLTAGE
D1	AGND	A	P	ANALOG GROUND
D2	R_{IN}	A	I	RIGHT ANALOG IN
D3	NC	A		NO CONNECT
D4	BYPASS	A	I	HALF-SUPPLY BYPASS
D5	LINEOUT	A	O	MONO LINE OUT
D6	RHP	A	O	RIGHT HEADPHONE OUTPUT
E1	EP-	A	O	MONO EARPIECE OUT-
E2	M_{IN}	A	I	MONO ANALOG IN
E3	L_{IN}	A	I	LEFT ANALOG IN
E4	R3DOUT	A	I	RIGHT CHANNEL 3D OUTPUT
E5	LHP	A	O	LEFT HEADPHONE OUTPUT
E6	CHP	A	O	HEADPHONE CENTER PIN OUTPUT (1/2 VDD)
F1	AGND	A	P	ANALOG GND
F2	EP+	A	O	MONO EARPIECE OUT+

PIN FUNCTIONS (continued)

F3	L3DIN	A	I	LEFT CHANNEL 3D INPUT
F4	L3DOUT	A	I	LEFT CHANNEL 3D OUTPUT
F5	R3DIN	A	I	RIGHT CHANNEL 3D INPUT
F6	AGND	A	P	ANALOG GND
G1	LLS-	A	O	LEFT SPEAKER OUT-
G2	AVDD	A	P	ANALOG SUPPLY VOLTAGE
G3	LLS+	A	O	LEFT SPEAKER OUT+
G4	RLS-	A	O	RIGHT SPEAKER OUT-
G5	AVDD	A	P	ANALOG SUPPLY VOLTAGE
G6	RLS+	A	O	RIGHT SPEAKER OUT+

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

Absolute Maximum Ratings(1)(2)(3)

Analog Supply Voltage		6.0V
Digital Supply Voltage		6.0V
Storage Temperature		-65°C to +150°C
Input Voltage		-0.3V to V_{DD} +0.3V
Power Dissipation(4)		Internally Limited
ESD Susceptibility(5)		2000V
ESD Susceptibility(6)		200V
Junction Temperature		150°C
Thermal Resistance	θ_{JA} (YPG0042)	61°C/W
See AN-1279 (Literature Number SNOA430)		

(1) All voltages are measured with respect to the GND pin unless otherwise specified.
(2) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional but do not ensure specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which ensure specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not ensured for parameters where no limit is given, however, the typical value is a good indication of device performance.
(3) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/Distributors for availability and specifications.
(4) The maximum power dissipation must be derated at elevated temperatures and is dictated by T_{JMAX} ,θ_{JA}, and the ambient temperature, T_A. The maximum allowable power dissipation is $P_{DMAX} = (T_{JMAX} – T_A) / \theta_{JA}$ or the number given in Absolute Maximum Ratings, whichever is lower.
(5) Human body model: 100pF discharged through a 1.5kΩ resistor.
(6) Machine model: 220pF - 240pF discharged through all pins.

Operating Ratings

Temperature Range	$T_{MIN} \le T_A \le T_{MAX}$	$-40°C \le T_A \le +85°C$
Supply Voltage		$2.7V \le AV_{DD} \le 5.5V$
		$2.7V \le DV_{DD} \le 4.0V$
		$2.4V \le I^2CV_{DD} \le 4.0V$

Audio Amplifier Electrical Characteristics AV_{DD} = 3.0V, DV_{DD} = 3.0V[1][2]

The following specifications apply for the circuit shown in Figure 1 with all programmable gain set at 0dB, unless otherwise specified. Limits apply for T_A = 25°C.

Symbol	Parameter	Conditions	LM4934		Units (Limits)
			Typical[3]	Limits[4][5]	
I_{DD}	Supply Current	V_{IN} = 0, No Load All Amps On + DAC, OCL	18.5	26.5	mA (max)
		Headphone Mode Only, OCL	5.6	8	mA (max)
		Stereo Speaker Mode Only	12	19.5	mA (max)
		Mono Speaker Mode Only	5.9	8	mA (max)
		DAC Off, All Amps On, OCL	14.6	22	mA (max)
I_{SD}	Shutdown Current[6]		0.6	2	µA (max)
P_O	Output Power	Speaker; THD = 1%; f = 1kHz, 8Ω BTL	420	370	mW (min)
		Headphone; THD = 1%; f = 1kHz, 32Ω SE	27	24	mW (min)
		Earpiece; THD = 1%; f = 1kHz, 32Ω BTL	45	40	mW (min)
$V_{FS\ DAC}$	Full Scale DAC Output		2.4		Vpp
THD+N	Total Harmonic Distortion	Speaker; P_O = 200mW; f = 1kHz, 8Ω BTL	0.04		%
		Headphone; P_O = 10mW; f = 1kHz, 32Ω SE	0.01		%
		Earpiece; P_O = 20mW; f = 1kHz, 32Ω BTL	0.04		%
		Line Out; V_O = 1Vrms; f = 1kHz, 10kΩ SE	0.004		%
V_{OS}	Offset Voltage	Speaker	8	55	mV (max)
		Earpiece	8	50	mV (max)
		HP (OCL)	8	40	mV
ϵ_O	Output Noise	A = weighted; 0dB gain; See Table 1	See Table 1		
PSRR	Power Supply Rejection Ratio	f = 217Hz; V_{ripple} = 200mV_{P-P} C_B = 2.2µF; See Table 2	See Table 2		
Xtalk	Crosstalk	Loudspeaker; P_O= 200mW f = 1kHz	–84		dB
		Headphone; P_O= 10mW f = 1kHz; SE	–85		dB
		Headphone; P_O= 10mW f = 1kHz; OCL	–60		dB
T_{WU}	Wake-Up Time	C_B = 2.2µF, CD6 = 0	35		ms
		C_B = 2.2µF, CD6 = 1	85		ms

(1) All voltages are measured with respect to the GND pin unless otherwise specified.
(2) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional but do not ensure specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which ensure specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not ensured for parameters where no limit is given, however, the typical value is a good indication of device performance.
(3) Typicals are measured at 25°C and represent the parametric norm.
(4) Limits are specified to Texas Instruments' AOQL (Average Outgoing Quality Level).
(5) Datasheet min/max specification limits are specified by design, test, or statistical analysis.
(6) Shutdown current is measured in a normal room environment.

Audio Amplifier Electrical Characteristics AV_{DD} = 5.0V, DV_{DD} = 3.3V(1)(2)

The following specifications apply for the circuit shown in Figure 1 with all programmable gain set at 0dB, unless otherwise specified. Limits apply for T_A = 25°C.

Symbol	Parameter	Conditions	LM4934		Units (Limits)
			Typical(3)	Limits(4)(5)	
I_{DD}	Supply Current	V_{IN} = 0, No Load All Amps On - DAC	24		mA (max)
		Headphone Mode Only	5.8		mA
		Stereo Speaker Mode Only	17		mA
		Mono Speaker Mode Only	7		mA
		DAC Off, All Amps On	19		mA
I_{SD}	Shutdown Current(6)		1.6		µA
P_O	Output Power	Speaker; THD = 1%; f = 1kHz, 8Ω BTL	1.2		W
		Headphone; THD = 1%; f = 1kHz, 32Ω SE	80		mW
		Earpiece; THD = 1%; f = 1kHz, 32Ω BTL	175		mW
$V_{FS\ DAC}$	Full Scale DAC Output		2.4		Vpp
THD+N	Total Harmonic Distortion	Speaker; P_O = 500mW; f = 1kHz, 8Ω BTL	0.03		%
		Headphone; P_O = 30mW; f = 1kHz, 32Ω SE	0.01		%
		Earpiece; P_O = 40mW; f = 1kHz, 32Ω BTL; CD4 = 0	0.04		%
		Line Out; V_O = 1Vrms; f = 1kHz, 10kΩ SE	0.003		%
V_{OS}	Offset Voltage	Speaker	8		mV
		Earpiece	8		mV
		HP (OCL)	8		mV
ϵ_O	Output Noise	A = weighted; 0dB gain; See Table 1	See Table 1		
PSRR	Power Supply Rejection Ratio	f = 217Hz; V_{ripple} = 200mV_{P-P} C_B = 2.2µF; See Table 3	See Table 3		
Xtalk	Crosstalk	Loudspeaker; P_O= 400mW f = 1kHz	–86		dB
		Headphone; P_O= 15mW f = 1kHz; OCL	–56		dB
		Headphone; P_O= 15mW f = 1kHz, SE	–80		dB
T_{WU}	Wake-Up Time	C_B = 2.2µF, CD6 = 0	45		ms
		C_B = 2.2µF, CD6 = 1	130		ms

(1) All voltages are measured with respect to the GND pin unless otherwise specified.
(2) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional but do not ensure specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which ensure specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not ensured for parameters where no limit is given, however, the typical value is a good indication of device performance.
(3) Typicals are measured at 25°C and represent the parametric norm.
(4) Limits are specified to Texas Instruments' AOQL (Average Outgoing Quality Level).
(5) Datasheet min/max specification limits are specified by design, test, or statistical analysis.
(6) Shutdown current is measured in a normal room environment.

Volume Control Electrical Characteristics[1][2]

The following specifications apply for 3V ≤ AV_{DD} ≤ 5V and 2.7V ≤ DV_{DD} ≤ 4.0V, unless otherwise specified. Limits apply for T_A = 25°C.

Symbol	Parameter	Conditions	LM4934		Units (Limits)
			Typical[3]	Limits[4][5]	
PGR	Stereo or Mono Analog Inputs PreAmp Gain Setting Range	minimum gain setting	–6	–6.5	dB (min)
				–5.5	dB (max)
		maximum gain setting	15	15.5	dB (max)
				14.5	dB (min)
VCR	Output Volume Control for Stereo Speakers, Headphone Output, or Mono Output Range	minimum gain setting, Vol = 00001	–56	–56.5	dB (min)
				–55.5	dB (max)
		maximum gain setting	5	4.5	dB (min)
				5.5	dB (max)
ΔA_{CH-CH}	Stereo Channel to Channel Gain Mismatch		0.3		dB
A_{MUTE}	Mute Attenuation	V_{in} = 1V_{rms}, Gain = 0dB with load, Vol = 00000			
		Headphone	<-90		dB
		Line Out	<-90		dB
R_{INPUT}	M_{IN}, L_{IN} and R_{IN} Input Impedance		23	18	kΩ (min)
				28	kΩ (max)

(1) All voltages are measured with respect to the GND pin unless otherwise specified.
(2) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is functional but do not ensure specific performance limits. Electrical Characteristics state DC and AC electrical specifications under particular test conditions which ensure specific performance limits. This assumes that the device is within the Operating Ratings. Specifications are not ensured for parameters where no limit is given, however, the typical value is a good indication of device performance.
(3) Typicals are measured at 25°C and represent the parametric norm.
(4) Limits are specified to Texas Instruments' AOQL (Average Outgoing Quality Level).
(5) Datasheet min/max specification limits are specified by design, test, or statistical analysis.

Digital Section Electrical Characteristics[1][2]

The following specifications apply for 3V ≤ AV_{DD} ≤ 5V and 2.7V ≤ DV_{DD} ≤ 4.0V, unless otherwise specified. Limits apply for T_A = 25°C.

Symbol	Parameter	Conditions	LM4934		Units (Limits)
			Typical[3]	Limits[4][5]	
DI_{SD}	Digital Shutdown Current[6]	Mode 0, DV_{DD} = 3.0V			
		No MCLK	0.01	1	µA
DI_{DD}	Digital Power Supply Current	f_{MCLK} = 12MHz, DV_{DD} = 3.0V			
		ALL MODES EXCEPT 0	5.3	8	mA
$PLLI_{DD}$	PLL Quiescent Current	f_{MCLK} = 12MHz, DV_{DD} = 3.0V	4.8	6	mA
Audio DAC (Typical numbers are with 6.144MHz audio clock and 48kHz sampling frequency					
R_{DAC}	Audio DAC Ripple	20Hz - 20kHz through headphone output	+/-0.1		dB
PB_{DAC}	Audio DAC Passband width	-3dB point	22.6		kHz
SBA_{DAC}	Audio DAC Stop band Attenuation	Above 24kHz	76		dB
DR_{DAC}	Audio DAC Dynamic Range	DC - 20kHz, –60dBFS; AES17 Standard See Table 4	See Table 4		dB
SNR	Audio DAC-AMP Signal to Noise Ratio	A-Weighted, Signal = V_O at 0dBFS, f = 1kHz Noise = digital zero, A-weighted, See Table 4	See Table 4		dB

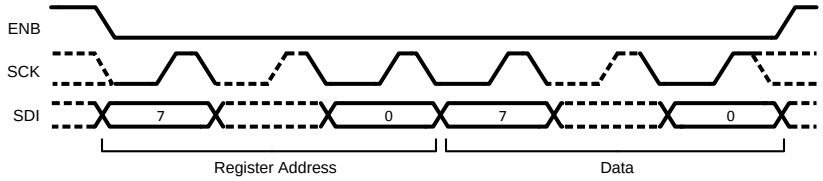
EP	97	87	dB

System Control

The LM4934 is controlled via either a three wire SPI or a two wire I^2C compatible interface, selectable with the MODE pin. When MODE is cleared the device is in I^2C mode, when MODE is set the device is in SPI mode. This interface is used to configure the operating mode, interfaces, data converters, mixers and amplifiers. The LM4934 is controlled by writing 8 bit data into a series of write-only registers, the device is always a slave for both type of interfaces.

THREE WIRE, SPI INTERFACE (MODE = 1)

Three Wire Mode Write Bus Transaction



Three Wire Mode Write Bus Timing

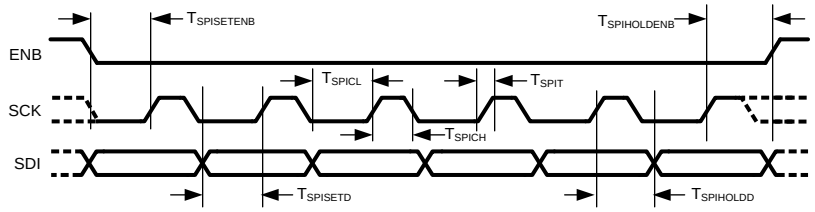


Figure 4. Three Wire Mode Write Bus

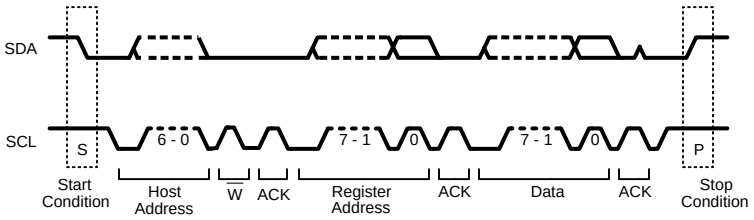
When the part is configured as an SPI device and the enable (ENB) line is lowered the serial data on SDI is clocked in on the rising edge of the SCK line. The protocol used is 16bit, MSB first. The upper 8 bits (15:8) are used to select an address within the device, the lower 8 bits (7:0) contain the updated data for this register.

TWO WIRE I^2C COMPATIBLE INTERFACE (MODE = 0)

Two Wire Mode Write Bus Transaction



Two Wire Mode Write Bus Timing

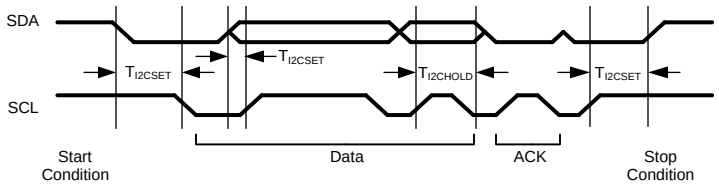


Figure 5. Two Wire Mode Write Bus

When the part is configured as an I^2C device then the LM4934 will respond to one of two addresses, according to the ADDR input. If ADDR is low then the address portion of the I^2C transaction should be set to write to 0010000. When ADDR is high then the address input should be set to write to 1110000.

PLL Configuration Registers

PLL M DIVIDER CONFIGURATION REGISTER

This register is used to control the input divider of the PLL.

Table 14. PLL_M (0Ah) (Set = logic 1, Clear = logic 0)(1)

Bits	Register	Description	
6:0	PLL_M	Programs the PLL input divider to select:	
		PLL_M	Divide Ratio
		0	Divider Off
		1	1
		2	1.5
		3	2
		4	2.5
		...	3→
		126	63.5
		127	64

(1) NOTES:
The M divider should be set such that the output of the divider is between 0.5 and 5MHz. See the PLL setup section for details.
The divider of the M divider is derived from PLL_M as such:
M = (PLL_M+1) / 2

PLL N DIVIDER CONFIGURATION REGISTER

This register is used to control PLL N divider.

Table 15. PLL_N (0Bh) (Set = logic 1, Clear = logic 0)(1)

Bits	Register	Description	
7:0	PLL_N	Programs the PLL feedback divider:	
		PLL_N	Divide Ratio
		0	Divider Off
		1 → 10	10
		11	11
		12	12
		...	...
		248	248
		249	249
		250 → 255	250

(1) NOTES:
The divider should be set such that the output of the divider is between 0.5 and 5MHz. See the PLL setup section for details. The N divider should never be set so that (Fin/M) * N > 55MHz (or 80MHz if FAST_VCO is set in the PLL_N_MOD register).
The non-sigma-delta division of the N divider is derived from the PLL_N as such:
N = PLL_N
Fin /M is often referred to as F_{comp} (Frequency of Comparison) or F_{ref} (Reference Frequency). In this document, F_{comp} is used.

PLL P DIVIDER CONFIGURATION REGISTER

This register is used to control the PLL's P divider.

Table 16. PLL_P (0Dh) (Set = logic 1, Clear = logic 0)(1)

Bits	Register	Description	
3:0	**PLL_P**	**Programs the PLL input divider to select:**	
		PLL_P	Divide Ratio
		0	Divider Off
		1	1
		2	1.5
		3	2
		...	–> 2.5
		13	7
		14	7.5
		15	8

(1) NOTES:
The division of the P divider is derived from PLL_P as such:
P = (PLL_P+1) / 2

PLL N MODULATOR AND DITHER SELECT CONFIGURATION REGISTER

This register is used to control the Fractional component of the PLL.

Table 17. PLL_N_MOD (0Ch) (Set = logic 1, Clear = logic 0)(1)

Bits	Register	Description	
4:0	PLL_N_MOD	This programs the PLL N Modulator's fractional component:	
		PLL_N_MOD	Fractional Addition
		0	0/32
		1	1/32
		2 → 30	2/32 → 30/32
		31	31/32
6:5	DITHER_LEVEL	Allows control over the dither used by the N Modulator	
		DITHER_LEVEL	DAC Sub-system Input Source
		00	Medium (32)
		01	Small (16)
		10	Large (48)
		11	Off
7	FAST_VCO	If set the VCO maximum and minimum frequencies are raised:	
		FAST_VCO	Maximum F_{VCO}
		0	40–55MHz
		1	55–80MHz

(1) NOTES:
The complete N divider is a fractional divider as such:
N = PLL_N + (PLL_N_MOD/32)
If the modulus input is zero, then the N divider is simply an integer N divider. The output from the PLL is determined by the following formula:
Fout = (Fin * N) / (M * P)
Please see over for more details on the PLL and common settings.

Further Notes on PLL Programming

The sigma-delta PLL is designed to drive audio circuits requiring accurate clock frequencies of up to 25MHz with frequency errors noise-shaped away from the audio band. The 5 bits of modulus control provide exact synchronization of 48kHz and 44.1kHz sample rates from any common clock source when the oversampling rate of the audio system is 125fs. In systems where 128x oversampling must be used (for example with an isochronous I2S data stream) a clock synchronous to the sample rate should be used as input to the PLL (typically the I2S clock). If no isochronous source is available then the PLL can be used to obtain a clock that is accurate to within typical crystal tolerances of the real sample rate.

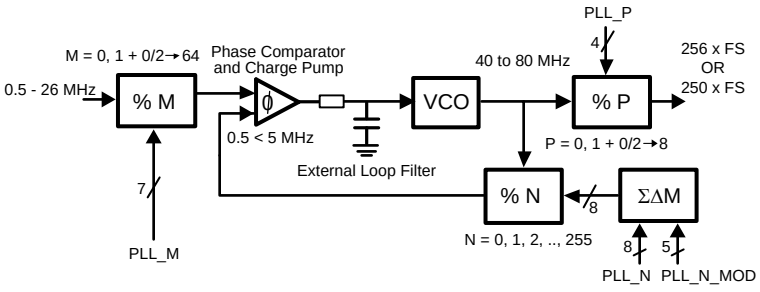

Table 18. Example Of Pll Settings For 48Khz Sample Rates

f_in (MHz)	fsamp (kHz)	M	N	P	PLL_M	PLL_N	PLL_N_MOD	PLL_P	f_out (MHz)
11	48	11	60	5	21	60	0	9	12

19.8	48	16.5	50	5	32	50	0	9	12

Table 19. Example Pll Settings For 44.1Khz Sample Rates

f_in (MHz)	fsamp (kHz)	M	N	P	PLL_M	PLL_N	PLL_N_MOD	PLL_P	f_out (MHz)
11	44.1	11	55.125	5	21	55	4	9	11.025000
11.2896	44.1	8	39.0625	5	15	39	2	9	11.025000
12	44.1	5	22.96875	5	9	22	31	9	11.025000
13	44.1	13	55.125	5	25	55	4	9	11.025000
14.4	44.1	12	45.9375	5	23	45	30	9	11.025000
16.2	44.1	9	30.625	5	17	30	20	9	11.025000
16.8	44.1	17	55.78125	5	33	55	25	9	11.025000
19.2	44.1	16	45.9375	5	31	45	30	9	11.025000
19.44	44.1	13.5	38.28125	5	26	38	9	9	11.025000
19.68	44.1	20.5	45.9375	4	40	45	30	7	11.025000
19.8	44.1	11	30.625	5	21	30	20	9	11.025000

These tables cover the most common applications, obtaining clocks for sample rates such as 22.05kHz and 192kHz should be done by changing the P divider value or the R divider in the clock configuration diagram.

If the user needs to obtain a clock unrelated to those described above, the following method is advised. An example of obtaining 11.2896 from 12.000MHz is shown below.

Choose a small range of P so that the VCO frequency is swept between 45 and 55MHz (or 60-80MHz if VCOFAST is used). Remembering that the P divider can divide by half integers. So for P = 4.0 → 7.0 sweep the M inputs from 2.5 → 24. The most accurate N and N_MOD can be calculated by:

N = FLOOR(((Fout/Fin)*(P*M)),1) (1)

N_MOD = ROUND(32*((((Fout)/Fin)*(P*M)-N),0)

This shows that setting M = 11.5, N = 75 N_MOD = 47 P = 7 gives a comparison frequency of just over 1MHz, a VCO frequency of just under 80MHz (so VCO_FAST must be set) and an output frequency of 11.289596 which gives a sample rate of 44.099985443kHz, or accurate to 0.33 ppm.

Care must be taken when synchronization of isochronous data is not possible, i.e. when the PLL has to be used in the above mode. The I2S should be master on the LM4934 so that the data source can support appropriate SRC as required. This method should only be used with data being read on demand to eliminate sample rate mismatch problems.

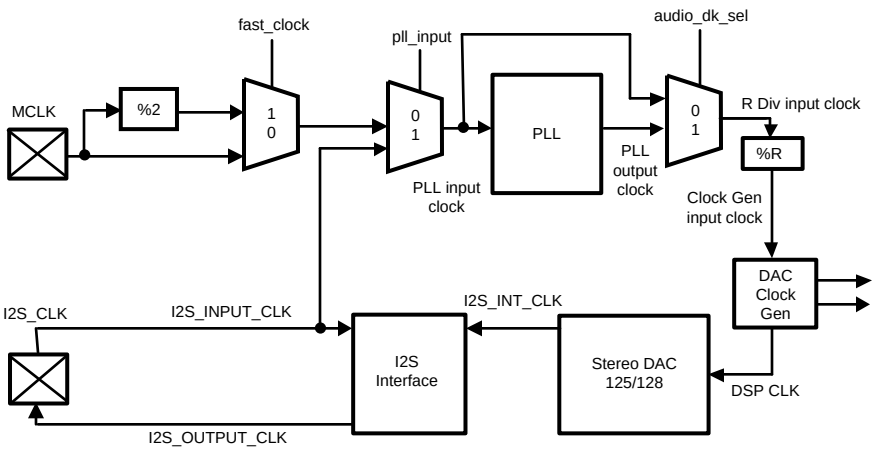
Where a system clock exists at an integer multiple of the required DAC clock rate it is preferable to use this rather than the PLL. The LM4934 is designed to work in 8,12,16,24,32, and 48kHz modes from a 12MHz clock without the use of the PLL. This saves power and reduces clock jitter.

Clock Configuration Register

This register is used to control the multiplexers and clock R divider in the clock module.

Table 20. CLOCK (09h) (Set = logic 1, Clear = logic 0)

Bits	Register	Description	
0	FAST_CLOCK	If set master clock is divided by two.	
		FAST_CLOCK	MCLK Frequency
		0	Normal
		1	Divided by 2
1	PLL_INPUT	Programs the PLL input multiplexer to select:	
		PLL_INPUT	PLL Input Source
		0	MCLK
		1	I2S Input Clock
2	AUDIO_CLK_SEL	Selects which clock is passed to the audio sub-system	
		DAC_CLK_SEL	DAC Sub-system Input Source
		0	PLL Input
		1	PLL Output
3	PLL_ENABLE	If set enables the PLL. (MODES 4–7 only)	
7:4	R_DIV	Programs the R divider	
		R_DIV	Divide Value
		0000	1
		0001	1
		0010	1.5
		0011	2
		0100	2.5
		0101	3
		0110	3.5
		0111	4
		1000	4.5
		1001	5
		1010	5.5
		1011	6
		1100	6.5
		1101	7
		1110	7.5
		1111	8



By default the stereo DAC operates at 250*fs, i.e. 12.000MHz (at the clock generator input clock) for 48kHz data. It is expected that the PLL be used to drive the audio system unless a 12.000MHz master clock is supplied. The PLL can also use the I2S clock input as a source. In this case, the audio DAC uses the clock from the output of the PLL.

Common Clock Settings for the DAC

The DAC can work in 4 modes, each with different oversampling rates, 125,128,64 & 32. In normal operation 125x oversampling provides for the simplest clocking solution as it will work from 12.000MHz (common in most systems with Bluetooth or USB) at 48kHz exactly. The other modes are useful if data is being provided to the DAC from an uncontrollable isochronous source (such as a CD player, DAB, or other external digital source) rather than being decoded from memory. In this case the PLL can be used to derive a clock for the DAC from the I2S clock.

The DAC oversampling rate can be changed to allow simpler clocking strategies, this is controlled in the DAC SETUP register but the oversampling rates are as follows:

DAC MODE	Oversampling Ratio Used
00	125
01	128
10	64
11	32

The following table describes the clock required at the clock generator input for various clock sample rates in the different DAC modes:

Fs (kHz)	DAC Oversampling Ratio	Required CLock at DAC Clock Generator Input (MHz)
8	125	2
8	128	2.048
11.025	125	2.75625
11.025	128	2.8224
12	125	3
12	128	3.072
16	125	4
16	128	4.096

Fs (kHz)	DAC Oversampling Ratio	Required CLock at DAC Clock Generator Input (MHz)
22.05	125	5.5125
22.05	128	5.6448
24	125	6
24	128	6.144
32	125	8
32	128	8.192
44.1	125	11.025
44.1	128	11.2896
48	125	12
48	128	12.288
88.2	64	11.2896
96	64	12.288
176.4	32	22.5792
192	32	24.576

Methods for producing these clock frequencies are described in the PLL section.

The R divider can be used when the master clock is exactly 12.00 MHz in order to generate different sample rates. The Table below shows different sample rates supported from 12.00MHz by using only the R divider and disabling the PLL. In this way we can save power and the clock jitter will be low.

R_DIV	Divide Value	DAC Clock Generator Input Frequency <MHz>	Sample Rate Supported <KHz>
11	6	2	8
9	5	2.4	9.6
7	4	3	12
5	3	4	16
4	2.5	4.8	19.2
3	2	6	24
2	1.5	8	32
0	1	12	48

The R divider can also be used along with the P divider in order to create the clock needed to support low sample rates.

DAC Setup Register

This register is used to configure the basic operation of the stereo DAC.

Table 21. DAC_SETUP (0Eh) (Set = logic 1, Clear = logic 0)

Bits	Register	Description			
1:0	DAC_MODE	The DAC used in the LM4934 can operate in one of 4 oversampling modes. The modes are described as follows:			
		DAC_MODE	Oversampling Rate	Typical FS	Clock Required
		00	125	48KHz	12.000MHz (USB Mode)
		01	128	44.1KHz 48KHz	11.2896MHz 12.288MHz
		10	64	96KHz	12.288MHz
		11	32	192KHz	24.576MHz
2	MUTE_L	Mutes the left DAC channel on the next zero crossing.			
3	MUTE_R	Mutes the right DAC channel on the next zero crossing.			
4	DITHER_OFF	If set the dither in DAC is disabled.			

Table 21. DAC_SETUP (0Eh) (Set = logic 1, Clear = logic 0) (continued)

Bits	Register	Description
5	DITHER ALWAYS_ON	If set the dither in DAC is enabled all the time.
6	CUST_COMP	If set the DAC frequency response can be programmed manually via a 5 tap FIR "compensation" filter. This can be used to enhance the frequency response of small loudspeakers or provide a crude tone control. The compensation Coefficients can be set by using registers 10h to 15h.

Interface Control Register

This register is used to control the I2S and I^2C compatible interface on the chip.

Table 22. INTERFACE (0Fh) (Set = logic 1, Clear = logic 0)(1)

Bits	Register	Description
0	I2S_MASTER_SLAVE	If set the LM4934 acts as a master for I2S, so both I2S clock and I2S word select are configured as outputs. If cleared the LM4934 acts as a slave where both I2S clock and word select are configured as inputs.
1	I2S_RESOLUTION	If set the I2S resolution is set to 32 bits. If clear, resolution is set to 16 bits. This bit only affects the I2S Interface in master mode. In slave mode the I2S Interface can support any I2S compatible resolution. In master mode the I2S resolution also depends on the DAC mode as the note below explains.
2	I2S_MODE	If set the I2S is configured in left justified mode timing. If clear, the I2S interface is configured in normal I2S mode timing.
3	I2C_FAST	If set enables the I2C to run in fast mode with an I2C clock up to 3.4MHz. If clear the I2C speed gets its default value of a maximum of 400kHz

(1) NOTES:
The master I2S format depends on the DAC mode. In USB mode the number of bits per word is 25 (i.e. 2.4MHz for a 48kHz sample rate). The duty cycle is 40/60. In non-USB modes the format is 32 or 16 bits per word, depending on I2S_RESOLTION and the duty cycle is always 50-50. In slave mode it will decode any I2S compatible data stream.

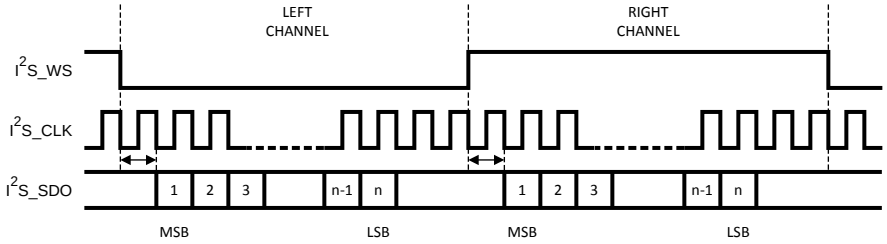


Figure 6. I2S Mode Timing

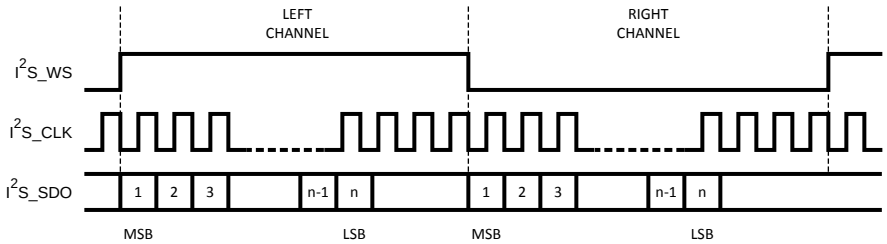

Figure 7. Left Justified Mode Timing

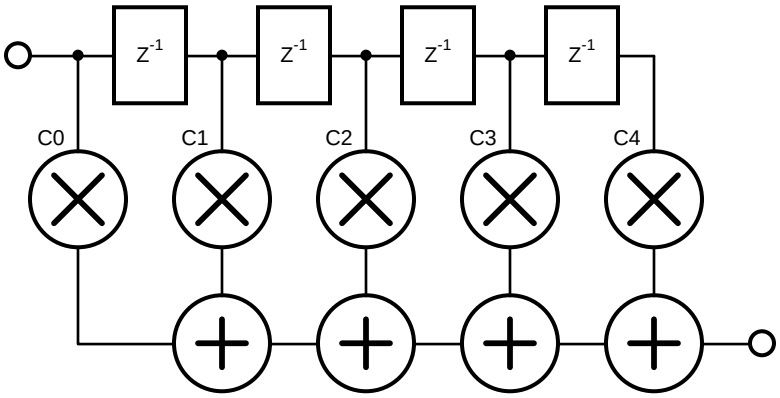
FIR Compensation Filter Configuration Registers

These registers are used to configure the DAC's FIR compensation filter. Three 16 bit coefficients are required and must be programmed via the I2C/SPI Interface in bytes as follows:

Table 23. COMP_COEFF (10h → 15h) (Set = logic 1, Clear = logic 0)(1)

Address	Register	Description
10h	COMP_COEFF0_LSB	Bits [7:0] of the 1st and 5th FIR tap (C0 and C4)
11h	COMP_COEFF0_MSB	Bits [15:8] of the 1st and 5th FIR tap (C0 and C4)
12h	COMP_COEFF1_LSB	Bits [7:0] of the 2nd and 4th FIR tap (C1 and C3)
13h	COMP_COEFF1_MSB	Bits [15:8] of the 2nd and 4th FIR tap (C1 and C3)
14h	COMP_COEFF2_LSB	Bits [7:0] of the 3rd FIR tap (C2)
15h	COMP_COEFF2_MSB	Bits [15:8] of the 3rd FIR tap (C2)

(1) NOTES:
The filter must be phase linear to ensure the data keeps the correct stereo imaging so the second half of the FIR filter must be the reverse of the 1st half.



If the CUST_COMP option in register 0Eh is not set the FIR filter will use its default values for a linear response from the DAC into the analog mixer, these values are:

DAC_OSR	C0, C4	C1, C3	C2
00	68	–412	28526
01, 10, 11	112	–580	27551

If using 96 or 192kHz data then the custom compensation may be required to obtain flat frequency responses above 24kHz. The total power of any custom filter must not exceed that of the above examples or the filters within the DAC will clip. The coefficient must be programmed in 2's complement.

Typical Performance Characteristics

THD+N vs Frequency
3V Lineout, R_L = 10kΩ, V_O = 850mV

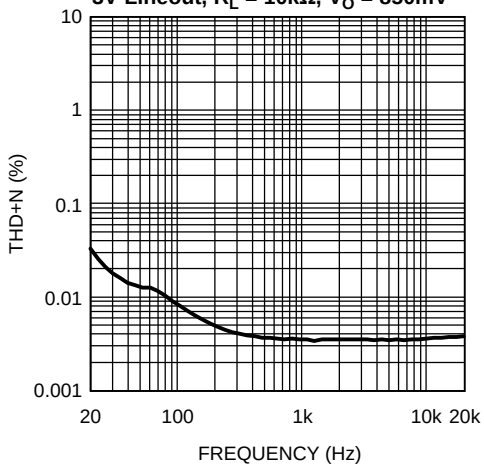


Figure 8.

THD+N vs Frequency

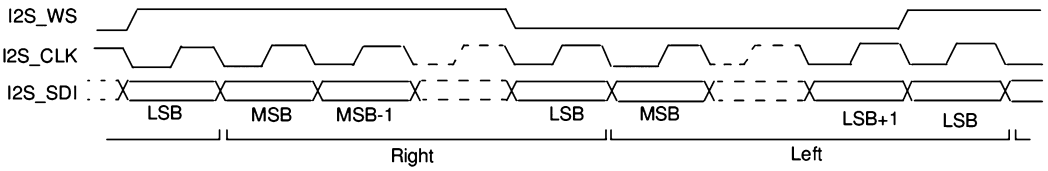
APPLICATION INFORMATION

I²S

The LM4934 supports both master and slave I2S transmission at either 16 or 32 bits per word at clock rates up to 3.072MHz (48kHz stereo, 32bit). The basic format is shown below:



TEXAS INSTRUMENTS 3D AUDIO ENHANCEMENT

The LM4934 utilizes a programmable gain version of Texas Instruments' 3D audio enhancement circuit. This allows 3D gain only (not frequency response) to be controlled via I2C/SPI in the Texas Instruments 3D Enhancement Level Select registers (3D1 and 3D0). Also, this circuit uses the same 3D path for both the headphone and stereo loudspeaker outputs, so the 3D effect remains constant when switching from headphone to stereo loudspeaker outputs unless changed in the registers. An added benefit of this is that the gain of the original signal is unaffected when 3D is turned on/off.

3D gain is established internally with R_{3D} (approximately 30kΩ) and externally with C_{3D}. Typical values for C_{3D} are around 0.22µF, but may varied for altered 3D response.

Gain Considerations

When using the mixer and 2,3,4, or 5 channels are summed into the stereo output (headphone or speaker), the gain of each individual input is automatically reduced by 1/N, where N is the number of channels being summed. This has the effect of maintaining the total signal output level for different modes (i.e.; when LIN and RIN are summed for a mono output, gain for RIN and LIN will each be reduced by 6dB). This is not true for mono output modes, like EP and lineout. For these cases, stereo inputs are treated as one input with a –6dB gain for each input before summing this with a mono input. An example of relative output levels for each mode is given below:

Mode	Mono Out	Stereo R Out	Stereo L Out
1	M	M	M
2	(AL/2)+(AR+2)	AR	AL
3	[M+(AL/2)+(AR/2)]/2	(M+AR)/2	(M+AL)/2
4	(DL/2)+(DR/2)	DR	DL
5	[(AL/2)+(AR/2)+(DL/2)+(DR/2)]/2	(AR+DR)/2	(AL+DL)/2
6	[M+(AL/2)+(AR/2)+(DL/2)+(DR/2)]/2	(M+AR+DR)/3	(M+AL+DL)/3
7	[M+(DL/2)+(DR/2)]/2	(M+DR)/2	(M+DL)/2

LM4934 DEMOBOARD OPERATION

BOARD LAYOUT

DIGITAL SUPPLIES

JP14 — Digital Power DVDD

JP14 — I/O Power IOVDD

JP14 — PLL Supply PLLVDD

JP14 — USB Board Supply BBVDD

JP14 — I2C VDD

All supplies may be set independently. All digital ground is common. Jumpers may be used to connect all the digital supplies together.

S9 – connects VDD_PLL to VDD_D

S10 – connects VDD_D to VDD_IO

S11 – connects VDD_IO to VDD_I2C

S12 – connects VDD_I2C to Analog VDD

S17 – connects BB_VDD to USB3.3V (from USB board)

S19 – connects VDD_D to USB3.3V (from USB board)

S20 – connects VDD_D to SPDIF receiver chip

ANALOG SUPPLY

JP11 — Analog Supply

S12 — connects Analog VDD with Digital VDD (I2C_VDD)

S16 — connects Analog Ground with Digital Ground

S21 — connects Analog VDD to SPDIF receiver chip

INPUTS

Analog Inputs

JP2 — Mono Input

JP6 — Left Input

JP7 — Right Input

Digital Inputs

JP19 — Digital Interface

Pin 1 — MCLK

Pin 2 — I2S_CLK

Pin 3 — I2S_SDI

Pin 4 — I2S_WS

JP20 — Toslink SPDIF Input

JP21 — Coaxial SPDIF Input

Coaxial and Toslink inputs may be toggled between by use of S25. Only one may be used at a time. Must be used in conjunction with on-board SPDIF receiver chip.

OUTPUTS

JP4 — Right BTL Loudspeaker Output

JP5 — Left BTL Loudspeaker Output

JP1 — Left Headphone Output (Single-Ended or OCL)

JP3 — Right Headphone Output (Single-Ended or OCL)

P1 — Stereo Headphone Jack (Same as JP1, JP2, Single-Ended or OCL)

JP12 — Mono BTL Earpiece Output

JP8 — Single-Ended Line Level Output

CONTROL INTERFACE

X1, X2 – USB Control Bus for I2C/SPI

X1

Pin 9 – Mode Select (SPI or I2C)

X2

Pin 1 – SDA

Pin 3 – SCL

Pin 15 – ADDR/END

Pin 14 – USB5V

Pin 16 – USB3.3V

Pin 16 – USB GND

MISCELLANEOUS

I2S BUS SELECT

S23, S24, S26, S27 – I2S Bus select. Toggles between on-board and external I2S (whether on-board SPDIF receiver is used). All jumpers must be set the same. Jumpers on top two pins selects external bus (JP19). Jumpers on bottom two pins selects on-board SPDIF receiver output.

HEADPHONE OUTPUT CONFIGURATION

Jumpers S1, S2, S3, and S4 are used to configure the headphone outputs for either cap-coupled outputs or output capacitorless (OCL) mode in addition to the register control internal to the LM4934 for this feature. Jumpers S1 and S3 bypass the output DC blocking capacitors when OCL mode is required. S2 connects the center amplifer HPCOUT to the headphone ring when in OCL mode. S4 connects the center ring to GND when cap-coupled mode is desired. S4 must be removed for OCL mode to function properly. Jumper settings for each mode:

OCL

S1 = ON

S2 = ON

S3 = ON

S4 = OFF

Cap-Coupled

S1 = OFF

S2 = OFF

S3 = OFF

S4 = ON

PLL FILTER CONFIGURATION

The LM4934 demo board comes with a simple filter setup by connecting jumpers S5 and S6. Removing these and connecting jumpers S7 and S8 will allow for an alternate PLL filter configuration to be used at R2 and C23.

ON-BOARD SPDIF RECEIVER

The SPDIF receiver present on the LM4934 demo board allows quick demonstration of the capabilities of the LM4934 by using the common SPDIF output found on most CD/DVD players today. There are some limitations in its useage, as the receiver will not work with digital supplies of less than 3V and analog supplies of less than 4V. This means low analog supply voltage testing of the LM4934 must be done on the external digital bus.

The choice of using on-board or external digital bus is made usign jumpers S23, S24, S26, and S27 as described above.

S25 selects whether the Toslink or Coaxial SPDIF input is used. The top two pins connects the toslink, the bottom two connect the coaxial input.

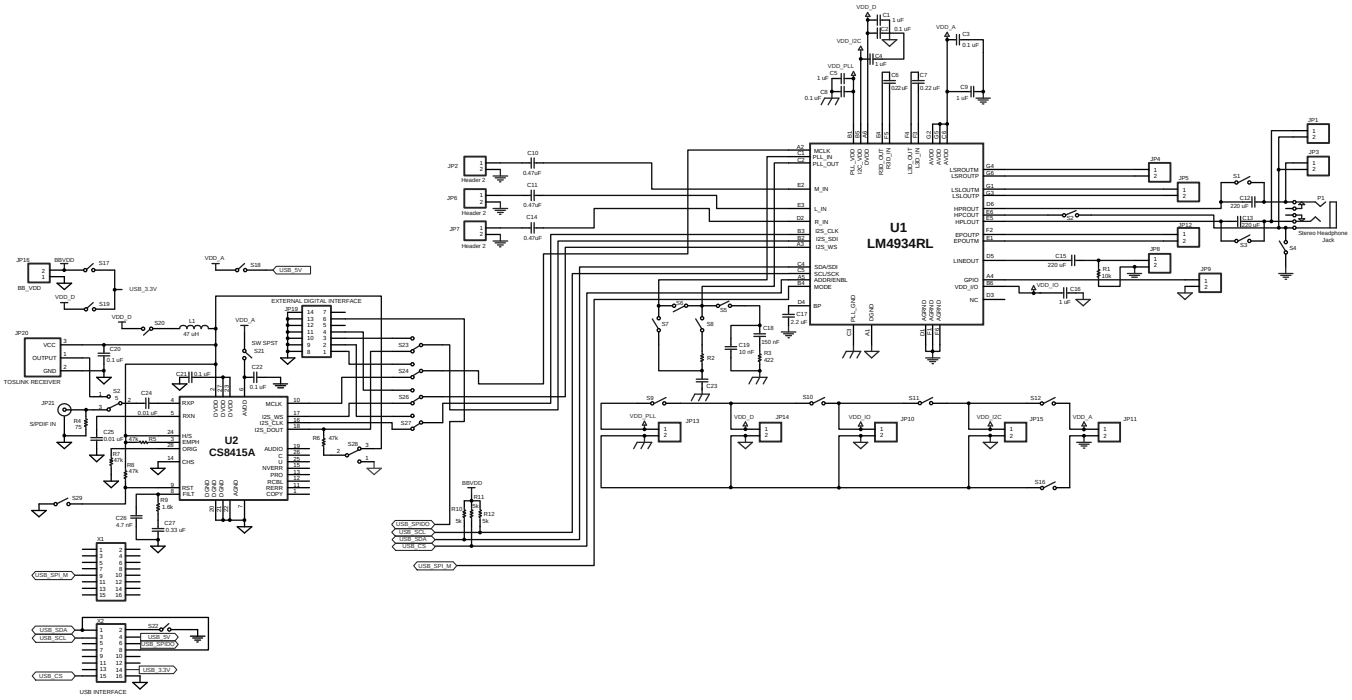
Power on the digital side is routed through S20 (connecting to the other digital supplies), while on the analog side it is interrupted by S21. Both jumpers must be in place for the receiver to function. The part is already configured for I2S standard outputs. Jumper S28 allows the DATA output to be pulled either high or low. Default is high (jumper on right two pins).

It may be necessary to quickly toggle S29 to reset the receiver and start it working upon initial power up.. A quick short across S29 should clear this condition.

LM4934 I²C/SPI INTERFACE SOFTWARE

Convenient graphical user interface software is available for demonstration purposes of the LM4934. It allows for either SPI or I²C control via either USB or parallel port connections to a Windows computer. Control options include all mode and output settings, volume controls, PLL and DAC setup, FIR setting and on-the-fly adjustment by an easy to use graphical interface. An advanced option is also present to allow direct, register-level commands.

Demonstration Board Schematic



REVISION HISTORY

Rev	Date	Description
1.0	9/22/05	Started D/S by copying LM4931 (DS201009). Did major edits.
1.1	9/27/05	Input some text/Typical/Limits on the EC tables.
1.2	10/6/05	Added Table 1, Table 2, and Table 3. Input some text edits also.
1.3	10/11/05	Input more edits.
1.4	10/12/05	First WEB release of the D/S.
1.5	10/13/05	D/S was taken out of the WEB per Daniel.
1.6	10/19/05	Text edits and curves.
1.7	10/21/05	Added K6 (by Diane T.), will release to the per Daniel.
1.8	10/24/06	Fixed typos, then released to the WEB.
1.9	11/10/05	Added the internal DAC SNR (with 95dB typ) under Key Spec and into the Digital EC table.
2.0	11/15/05	Added the SNR DAC, then re-webd per Daniel.
2.1	12/14/05	Removed the WL package and replaced it with the RL.
2.2	12/19/05	Removed the WL package and replaced it with the RL package (per Veronica and Daniel A.), then released D/S to the WEB.
2.3	1/19/06	Edited 20166956 (board schem, changed WL to RL), X1, X2,and X3 values.
2.4	2/13/06	Switched the labels of B3 and B2 on the Demo Board Schematic (pg 37) per Daniel.

Changes from Revision E (April 2013) to Revision F **Page**

- Changed layout of National Data Sheet to TI format 35

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
LM4934RL/NOPB	ACTIVE	DSBGA	YPG	42		TBD	Call TI	Call TI	-40 to 85	GG9	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

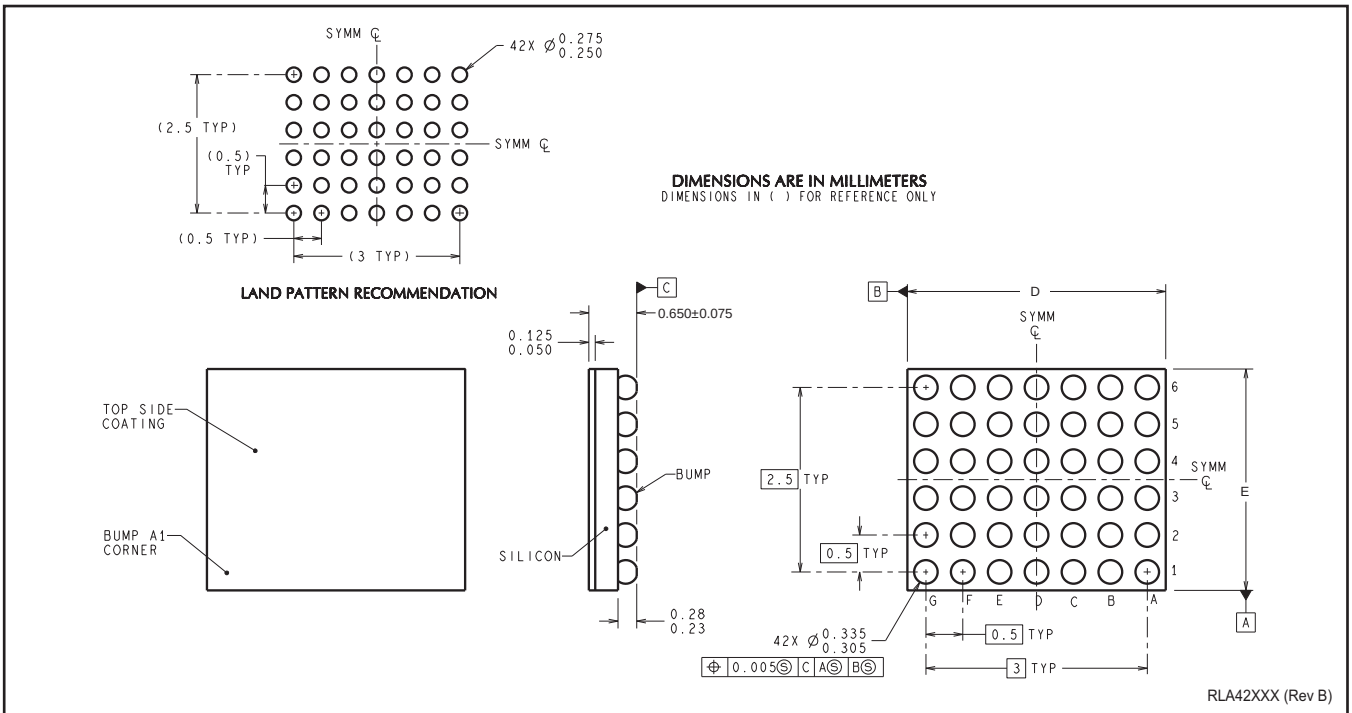
(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check http://www.ti.com/productcontent for the latest availability information and additional product content details.
TBD: The Pb-Free/Green conversion plan has not been defined.
Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.
Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.
Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

YPG0042



4214896/A 12/12

NOTES: A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
B. This drawing is subject to change without notice.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
