

M05 Actuator Magnet

Description

The M05 is one of our smallest rectangular magnets in housing featuring a single slot for adjustable screw mounting. The M05 is as an actuator which is used in conjunction with our various [reed sensor series](#). Bringing the magnet into proximity with the reed switch internal to the sensor will close the contacts. When the magnet is withdrawn, the reed contacts will re-open.

The open and closure points of the reed sensor will vary depending on it's internal reed switch as well as the size, strength, position and movement of the permanent magnets.
