## 8. Layout Guide:

### a. Solder Land Pattern:

Land pattern for soldering (black marking areas) is as shown below. Matching circuit is needed for good performance, when customer's device is different.

### b. Matching circuit :

(Center frequency is about 915 MHz @ 80 x 40 mm<sup>2</sup> Evaluation Board)

System Matching Circuit Component			
Location	Description	Vendor	Tolerance
1	N/A*	-	-
2	0Ω*	(0402)	-
3	5.0pF*	Murata (0402)	±0.05 pF
4	12pF*	Murata (0402)	±5 %

\*Typical reference values which may need to be changed when circuit boards or part vendors are different.

## 9. Soldering Conditions:

### a. Typical Soldering Profile for Lead-free Process

## 10. Reminders for users of Unictron's chip antennas

- Since Unictron's chip antennas are made of ceramic materials which show different rigidity than circuit board materials, bending of circuit board at the locations where chip antennas are mounted may cause the cracking of solder joints or antenna itself.
- Any connecting strip which will be cut off at PCB assembly process shall be located away from the installation site of chip antenna. Punching of the connecting strip may cause severe bending of the circuit board and cracking of solder joint or chip antenna itself may occur.
- Be cautious when ultrasonic welding process needs to be used near the locations where chip antennas are installed. Strong ultrasonic vibration may cause the cracking of chip antenna solder joints.
