

## Metallized Polypropylene Film Capacitors DC-Link Capacitor

### FEATURES

- Slim line, low building height
- Very long useful life time: Up to 100 000 h at  $U_{NDC}$  and 70 °C
- High ripple current capability, low ESR, low ESL
- Temperature range: 105 °C
- Mounting: Radial
- Material categorization: For definitions of compliance please see [www.vishay.com/doc?99912](http://www.vishay.com/doc?99912)

**RoHS**  
COMPLIANT  
HALOGEN  
**FREE**  
**GREEN**  
(5-2008)

### APPLICATIONS

- PV micro inverters
- LED street lighting
- On board chargers (EV/HEV), battery chargers

### QUICK REFERENCE DATA

Rated capacitance range	2 $\mu$ F to 100 $\mu$ F
Capacitance tolerance	5 %
Rated voltage range, $U_{NDC}$	500 V to 1000 V
Climatic testing class	40/105/56
Rated temperature	85 °C
Maximum permissible case temperature	105 °C, observing voltage derating
Maximum applicable peak to peak ripple voltage	0.2 x $U_{NDC}$
Reference standards	IEC 61071, IEC 60068
Dielectric	Polypropylene film
Electrodes	Metallized dielectric capacitor
Construction	Mono construction
Encapsulation	Plastic case sealed with resin; flame retardant
Terminals	Tinned wire
Self inductance ( $L_s$ )	< 1 nH per mm of lead spacing
Withstanding DC voltage between terminals <sup>(1)</sup>	1.5 $U_{NDC}$ for 10 s, cut off current 10 mA, rise time $\leq$ 1000 V/s
Insulation resistance	RC between leads, after 1 min > 10 000 s For $U_{NDC} \leq$ 500 V measuring voltage 100 V For $U_{NDC} >$ 500 V measuring voltage 500 V
Life time expectancy	Useful life time: > 100 000 h at $U_{NDC}$ and 70 °C FIT: < 10 x 10 <sup>-9</sup> /h (10 per 10 <sup>9</sup> component h) at 0.5 x $U_{NDC}$ , 40 °C
Marking	C-value; tolerance; rated voltage; code for dielectric material; code for manufacturing origin; manufacturer's type designation; manufacturer's logo; year and week of manufacture

#### Notes

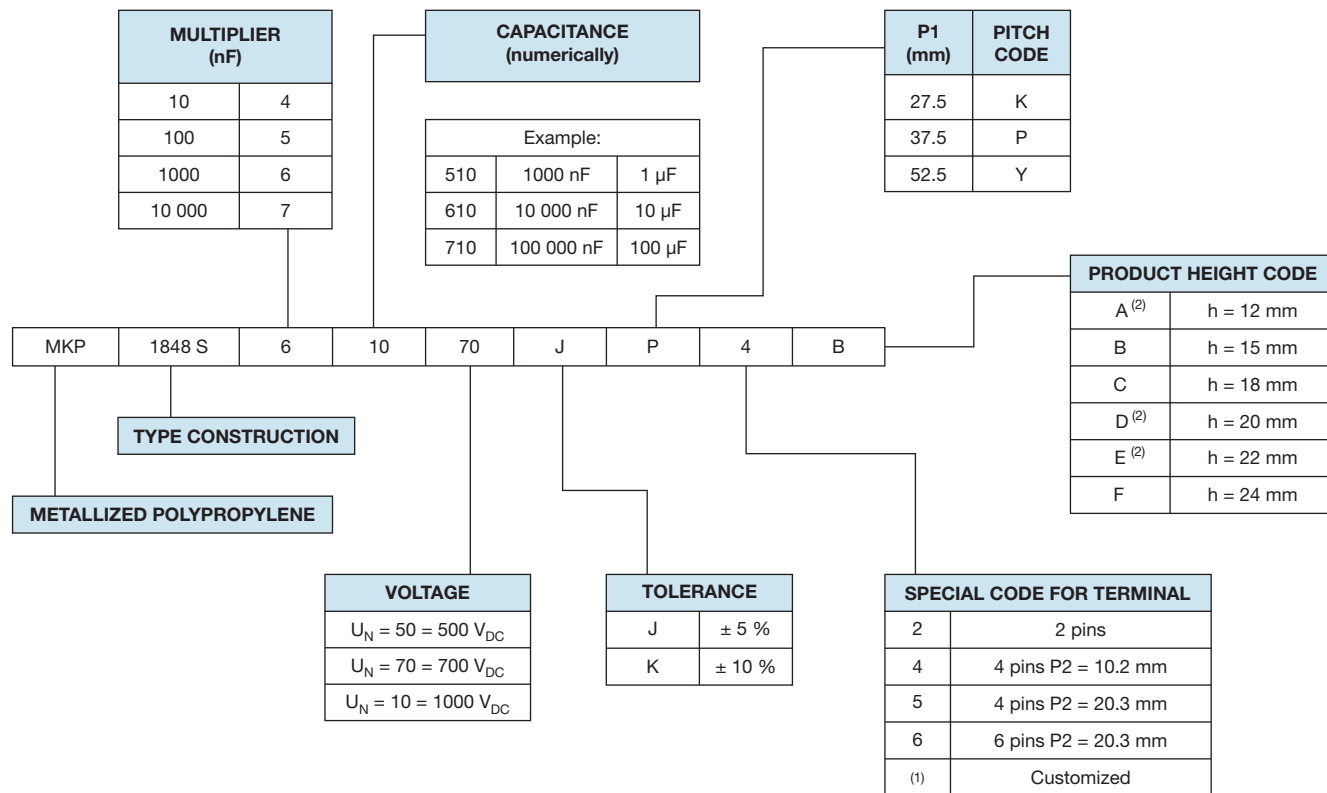

- For more detailed data and test requirements, contact [dc-film@vishay.com](mailto:dc-film@vishay.com)
  - For general information like characteristics and definitions used for film capacitors follow the link: [www.vishay.com/doc?28147](http://www.vishay.com/doc?28147)
- <sup>(1)</sup> See document "Voltage Proof Test for Metalized Capacitors" ([www.vishay.com/doc?28169](http://www.vishay.com/doc?28169))

### DC VOLTAGE RATINGS

$U_{NDC}$ at 85 °C	500 V	700 V	1000 V
$U_{OPDC}$ at 70 °C	600 V	800 V	1200 V
$U_{OPDC}$ at 105 °C	350 V	500 V	750 V

## COMPOSITION OF CATALOG NUMBER

### Notes

- (1) Tabs terminals or customized terminals are available on request
- (2) Product height on request

## CONSTRUCTION DESCRIPTION

Low inductive wound cell elements of metallized polypropylene film, potted with resin in a flame retardant case.

## SPECIFIC METHOD OF MOUNTING TO WITHSTAND VIBRATION AND SHOCK

The capacitor unit is designed for mounting on a printed circuit board. In order to withstand vibration and shock tests, it must be insured that the stand-off pips are in good contact with the printed circuit board. The capacitors shall be mechanically fixed by the leads and the body clamped.

## SPACE REQUIREMENTS ON PRINTED-CIRCUIT BOARD FOR 2 PINS PRODUCTS

The maximum space for length ( $l_{max.}$ ), width ( $w_{max.}$ ) and height ( $h_{max.}$ ) of film capacitors to take in account on the printed circuit board is shown in the drawings.

For products with pitch = 37.5 mm,  $\Delta = 0.7$  mm for  $l$  and  $w$ , and  $\Delta = 0$  mm for  $h$

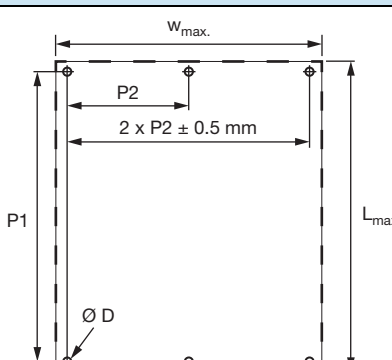

For products with pitch = 52.5 mm,  $\Delta = 1.0$  mm for  $l$  and  $w$ , and  $\Delta = 0$  mm for  $h$

Eccentricity defined as in drawing. The maximum eccentricity is smaller than or equal to the lead diameter of the product concerned.

## SPACE REQUIREMENTS ON PRINTED-CIRCUIT BOARD FOR MULTIPLE PINS PRODUCTS

The product height with seating plane as given by "IEC 60717" as reference:  $h_{max.} = h$ . The maximum length and width of film capacitors is shown in the figure.

DIMENSIONS in millimeters				
				
P1	L <sub>max.</sub>	W <sub>max.</sub>	Ø D	H
37.5	$l + 1.5$	$w + 1.8$	1.5	$h + 0.5$
52.5	$l + 1.8$	$w + 2.0$	1.7	$h + 0.5$

## SOLDERING CONDITIONS

For general soldering conditions and wave soldering profile we refer to the document "Soldering Conditions Vishay Film Capacitors": [www.vishay.com/doc?28171](http://www.vishay.com/doc?28171)

## STORAGE TEMPERATURE

Storage temperature:  $T_{stg} = -25\text{ °C}$  to  $+35\text{ °C}$  with RH maximum 75 % without condensation

## RATINGS AND CHARACTERISTICS REFERENCE CONDITIONS

Unless otherwise specified, all electrical values apply to an ambient temperature of  $23\text{ °C} \pm 1\text{ °C}$ , an atmospheric pressure of 86 kPa to 106 kPa and a relative humidity of  $50\% \pm 2\%$ .

For reference testing, a conditioning period shall be applied over  $96\text{ h} \pm 4\text{ h}$  by heating the products in a circulating air oven at the rated temperature and a relative humidity not exceeding 20 %.

**CHARACTERISTICS**

Capacitance as a function of ambient temperature (typical)

Insulation resistance as a function of ambient temperature (typical)

Lifetime expectancy (typical)

Maximum  $I_{RMS}$  current in function of ambient temperature

Impedance vs. Frequency (typical)

Impedance vs. Frequency (typical)

### POWER DISSIPATION AND MAXIMUM COMPONENT TEMPERATURE RISE

The power dissipation must be limited in order not to exceed the maximum allowed component temperature rise as a function of the free air ambient temperature.

The component temperature rise ( $\Delta T$ ) can be measured or calculated by  $\Delta T = P/G$ :

- $\Delta T = T_{\text{case}} - T_{\text{ambient}} = \text{Case temperature rise (°C)}$  with a maximum of 15 °C at rated temperature.
- $P = I_{\text{RMS}}^2 \times \text{ESR} = \text{Power dissipation of the component (mW)}$
- $G = \text{Heat conductivity of the component (mW/°C)}$

### MEASURING THE COMPONENT TEMPERATURE

The case temperature is measured in unloaded condition ( $T_{\text{amb}}$ ) and loaded condition ( $T_{\text{C}}$ ).

To avoid external thermal radiation or convection, the capacitor must be tested in a closed area, free from air circulation.

## APPLICATION NOTES AND LIMITING CONDITIONS

These capacitors are not suitable for mains applications as across-the-line capacitors without additional protection. These mains applications are strictly regulated in safety standards and therefore electromagnetic interference suppression capacitors conforming the standards must be used.

To select the capacitor for a certain application, the following conditions must be checked:

1. The continuous peak voltage ( $U_{p+}$ ) shall not exceed the DC voltage rating ( $U_{NDC}$ )
2. The peak-to-peak ripple voltage ( $U_{pp}$ ) shall not be greater than  $0.2 \times U_{NDC}$

Non reversing recurrent waveform

3. For capacitors connected in parallel, normally the proof voltage and possibly the rated voltage must be reduced. For information depending of the capacitance value and the number of parallel connections contact [dc-film@vishay.com](mailto:dc-film@vishay.com).
4. The voltage peak slope ( $dU/dt$ ) shall not exceed the pulse slope at the DC voltage rating.  
If the pulse voltage is lower than the rated DC voltage, the rated voltage pulse slope may be multiplied by  $U_{NDC}$  and divided by the applied voltage.

For all other pulses following equation must be fulfilled:

$$2 \times \int_0^T \left( \frac{dU}{dt} \right)^2 \times dt < U_{NDC} \times \left( \frac{dU}{dt} \right)_{rated}$$

T is the pulse duration

MAXIMUM REPETITIVE PEAK VOLTAGES	
REPETITIVE SURGE VOLTAGE	MAXIMUM DURATION PER DAY
$1.1 \times U_{NDC}$	30 % of on load duration
$1.15 \times U_{NDC}$	30 min
$1.2 \times U_{NDC}$	5 min
$1.3 \times U_{NDC}$	1 min
$1.5 \times U_{NDC}$	110 ms

### Note

- The capacitor unit may be subjected to the following surge without any significant reduction of lifetime expectancy

<b>INSPECTION REQUIREMENTS</b>		
<b>SUB-CLAUSE NUMBER AND TEST</b>	<b>CONDITIONS</b>	<b>PERFORMANCE REQUIREMENTS</b>
<b>ROUTINE TEST - FINAL INSPECTION</b>		
5.14.2-1 External inspection, visual examination		Legible marking as specified
5.14.2-2 Dimensions		See specification drawing
5.3-1 Capacitance	1 kHz at room temperature	See specific reference data
5.3-2 tan $\delta$	1 kHz at room temperature 10 kHz at room temperature	See specific reference data
5.5.1-2 Voltage test between terminals	1.5 x $U_{NDC}$ at $T_{amb}$ Duration: 10 s	No visible damage or puncture No flashover
5.7 Insulation resistance	$U_{NDC} \leq 500$ V measuring voltage 100 V at room temperature $U_{NDC} > 500$ V measuring voltage 500 V at room temperature Duration: 1 min	See specific reference data
<b>TYPE TESTS</b>		
5.14.2 External inspection	Check for finish, marking and overall dimensions	Legible marking and finish as specified Dimensions: See specification drawing
