WIMA FKM 2

Film and Foil Capacitors with Mixed Dielectric for Pulse Applications in PCM 5 mm

Special Features

- Pulse duty construction
- Constant capacitance value versus temperature (similar to the obsolete Polycarbonate)
- Low dissipation factor
- According to RoHS 2002/95/EC

Typical Applications

For general DC-applications requiring a high capacitance stability versus temperature e.g.

- Automotive electronics
- Lighting

Construction

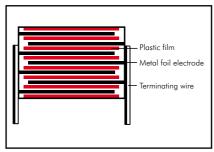

Dielectric:

Mixed film

Capacitor electrodes:

Metal foil

Internal construction:

Encapsulation:

Solvent-resistant, flame-retardant plastic case with epoxy resin seal, UL 94 V-0

Terminations:

Tinned wire.

Marking:

Colour: Red. Marking: Gold. Epoxy resin seal: Yellow.

Electrical Data

Capacitance range:

1000 pF to 0.022 μ F (E12-values on request)

Rated voltages:

100 VDC, 250 VDC, 400 VDC

Capacitance tolerances:

 \pm 20%, \pm 10%, \pm 5% (\pm 2.5% available subject to special enquiry)

Operating temperature range:

-55° C to +100° C

Climatic test category:

55/100/56 in accordance with IEC

Insulation resistance at +20° C:

 $\geq 5 \times 10^5 M\Omega$

(mean value: 1 x 10^6 M Ω) Measuring voltage: 100 V/1 min.

Test voltage: $2 U_r$, 2 sec.

Dissipation factors at $+20^{\circ}$ C: tan δ

at f	C ≤ 0.022 µ F
1 kHz	$\leq 3 \times 10^{-3}$
10 kHz	$\leq 5 \times 10^{-3}$
100 kHz	$\leq 8 \times 10^{-3}$

Maximum pulse rise time:

1000 V/ μ sec for pulses equal to the rated voltage

Mechanical Tests

Pull test on leads:

10 N in direction of leads according to IEC 60068-2-21

Vibration:

6 hours at 10 ... 2000 Hz and 0.75 mm displacement amplitude or 10 g in accordance with IEC 60068-2-6

Low air density:

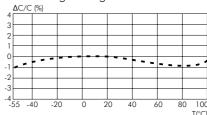

1kPa = 10 mbar in accordance with IEC 60068-2-13

Bump test:

4000 bumps at 390 m/sec² in accordance with IEC 60068-2-29

Capacitance change versus temperature

(f = 1 kHz) (general guide)

Voltage derating:

A voltage derating factor of 1.35 % per K must be applied from +85° C for DC voltages and from +75° C for AC voltages

Reliability:

Operational life > 300 000 hours Failure rate < 5 fit (0.5 x U, and 40° C)

Packing

Available taped and reeled.

Detailed taping information and graphs at the end of the catalogue.

For further details and graphs please refer to Technical Information.

WIMA FKM 2

Recommendation for Processing and Application of **Through-Hole Capacitors**

Soldering Process

A preheating of through-hole WIMA capacitors is allowed for temperatures $T_{\text{max}} < 100 \,^{\circ} \text{C}.$

In practice a preheating duration of t < 5 min. has been proven to be best.

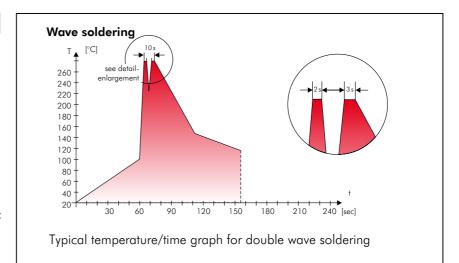

Single wave soldering

Soldering bath temperature: $T < 260^{\circ} C$ Immersion time: t < 5 sec

Double wave soldering

Soldering bath temperature: $T < 260^{\circ} C$ Immersion time: $2 \times t < 3 \text{ sec}$

Due to different soldering processes and heat requirements the graphs are to be regarded as a recommendation only.

WIMA Quality and Environmental Philosophy

ISO 9001:2000 Certification

ISO 9001:2000 is an international basic standard of quality assurance systems for all branches of industry. The approval according to ISO 9001:2000 of our factories by the VDE inspectorate certifies that organisation, equipment and monitoring of quality assurance in our factories correspond to internationally recognized standards.

WIMA WPCS

The WIMA Process Control System (WPCS) is a quality surveillance and optimization system developed by WIMA. WPCS is a major part of the quality-oriented WIMA production. Points of application of WPCS during production process:

- incoming material inspection
- metallization
- film inspection
- schoopage
- pre-healing
- lead attachment
- cast resin preparation/ encapsulation
- 100% final inspection
- AQL check

WIMA Environmental Policy

All WIMA capacitors, irrespective of whether through-hole devices or SMD, are made of environmentally friendly materials. Neither during manufacture nor in the product itself any toxic substances are used, e.g.

- Lead
- PBB/PBDE
- PCB
- Arsenic
- CFC

- Hydrocarbon chloride
- Cadmium
- Chromium 6+
- Mercury

We merely use pure, recyclable materials for packing our components, such as:

- carton
- cardboard
- adhesive tape made of paper
- polystyrene

We almost completely refrain from using packing materials such as:

- foamed polystyrene (Styropor®)
- adhesive tapes made of plastic
- metal clips

RoHS Compliance

According to the RoHS Directive 2002/95/EC certain hazardous substances like e.g. lead, cadmium, mercury must not be used any longer in electronic equipment as of July 1st, 2006. For the sake of the environment WIMA has refraind from using such substances since years already.

Tape for lead-free WIMA capacitors

DIN EN ISO 14001:2005

WIMA's environmental management has been established in accordance with the auidelines of DIN EN ISO 14001:2005. The certification has been granted in June 2006.

Typical Dimensions for Taping Configuration

WIMA Part Number System

A WIMA part number consists of 18 digits and is composed as follows:

Field 1 - 4: Type description

Field 5 - 6: Rated voltage

Field 7 - 10: Capacitance

Field 11 - 12: Size and PCM

Field 13 - 14: Special features (e.g. Snubber versions)

Field 15: Capacitance tolerance

Packing Packing Field 16:

Field 17 - 18: Lead length (untaped)
