WIMA MKP-X2 R

Metallized Polypropylene (PP) RFI-Capacitors Class X2 with Internal Series Connection PCM 15 mm to 48.5 mm

Special Features

- Reliable self-healing
- Increased corona inception level due to internal series connection
- High degree of interference suppression due to good attenuation and low ESR
- According to RoHS 2002/95/EC

Typical Applications

Class X2 RFI applications to meet EMC regulations

- Capacitors connected to the mains between phase and neutral or phase conductors
- Installation category II in accordance with IEC 60664, pulse peak voltage ≤ 2.5 kV

As capacitor voltage divider in applications requiring a high capacitance stability over time

Construction

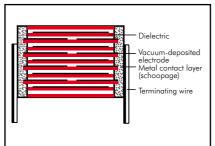

Dielectric:

Polypropylene (PP) film

Capacitor electrodes:

Vacuum-deposited

Internal construction:

Encapsulation:

Solvent-resistant, flame-retardant plastic case with epoxy resin seal, UL 94 V-0

Terminations:

Tinned wire.

Marking:

Colour: Red. Marking: Black.

Electrical Data

Capacitance range:

0.033 µF to 10 µF

Rated voltage:

400 VAC

Continuous DC voltage* (general guide): ≤ 1000 V

Capacitance tolerances:

 $\pm 20\%$, $\pm 10\%$ ($\pm 5\%$ available subject to special enquiry)

Operating temperature range:

-55° C to +105° C

Climatic test category:

55/105/56/C in accordance with IEC

Insulation resistance at +20° C:

 $C \le 0.33 \ \mu F_{:} \ge 15 \times 10^{3} \ M\Omega$

 $C > 0.33 \ \mu\text{F}$: $\geq 5000 \ \text{sec} \ (M\Omega \times \mu\text{F})$

Measuring voltage: 100 V/1 min.

Dissipation factors at $+20^{\circ}$ C: tan δ

| T | specifications |
|------|----------------|
| 1291 | specifications |

In accordance with IEC 60384-14

Maximum pulse rise time:

100 V/ μ sec for pulses equal to a voltage amplitude with $\sqrt{2}$ x 400 VAC = 565 V according to IEC 60384-14

Test voltage:

 $C \le 1.0 \ \mu F$: 2260 VDC, 2sec. $C > 1.0 \ \mu F$: 1800 VDC, 2sec.

Reliability:

Operational life $> 300\,000$ hours Failure rate < 2 fit $10.5 \times U_r$ and 40° CI

| at f | C ≤ 0.1 µ F | 0.1 µF < C ≤ 1.0 µF | C > 1.0 µF |
|-------------------|--|-------------------------|-------------------------|
| 1 kHz | ≤ 8 x 10 ⁻⁴ | ≤ 8 x 10 ⁻⁴ | ≤ 10 x 10 ⁻⁴ |
| 10 kHz 100 kHz | ≤ 12 x 10 ⁻⁴ ≤ 25 x 10 ⁻⁴ | ≤ 12 x 10 ⁻⁴ | _ _ |

Mechanical Tests

Pull test on pins:

10 N in direction of pins according to IEC 60068-2-21

Vibration:

6 hours at 10 ... 2000 Hz and 0.75 mm displacement amplitude or 10 g in accordance with IEC 60068-2-6

Low air density:

1kPa = 10 mbar in accordance with IEC 60068-2-13

Bump test:

4000 bumps at 390 m/sec² in accordance with IEC 60068-2-29

* The permissible pulse rise time du/dt (Γ_{max} .) will be subject to a reduction according to

 $F_{\text{max.}} = F_{\text{r}} \times \sqrt{2} \times \text{UAC/UDC}$

if the DC operating voltage UDC is higher than $\sqrt{2}\,x$ UAC

Packing

Available taped and reeled up to and including case size $15 \times 26 \times 31.5$ / PCM 27.5 mm.

Detailed taping information and graphs at the end of the catalogue.

For further details and graphs please refer to Technical Information.

Recommendation for Processing and Application of Through-Hole Capacitors

Soldering Process

A preheating of through-hole WIMA capacitors is allowed for temperatures $T_{\rm max} < 100\,^{\circ}$ C.

In practice a preheating duration of t < 5 min. has been proven to be best.

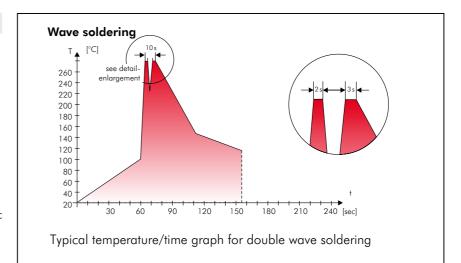

Single wave soldering

Soldering bath temperature: $T < 260^{\circ}$ C Immersion time: t < 5 sec

Double wave soldering

Soldering bath temperature: $T < 260 \,^{\circ}$ C Immersion time: $2 \, x \, t < 3 \, \text{sec}$

Due to different soldering processes and heat requirements the graphs are to be regarded as a recommendation only.

WIMA Quality and Environmental Philosophy

ISO 9001:2008 Certification

ISO 9001:2008 is an international basic standard of quality assurance systems for all branches of industry. The approval according to ISO 9001:2008 of our factories by the VDE inspectorate certifies that organisation, equipment and monitoring of quality assurance in our factories correspond to internationally recognized standards.

WIMA WPCS

The WIMA Process Control System (WPCS) is a quality surveillance and optimization system developed by WIMA. WPCS is a major part of the quality-oriented WIMA production. Points of application of WPCS during production process:

- incoming material inspection
- metallization
- film inspection
- schoopage
- pre-healing
- pin attachment
- cast resin preparation/ encapsulation
- 100% final inspection
- AQL check

WIMA Environmental Policy

All WIMA capacitors, irrespective of whether through-hole devices or SMD, are made of environmentally friendly materials. Neither during manufacture nor in the product itself any toxic substances are used, e.g.

- Lead
- PBB/PBDE
- PCB
- Arsenic
- CFC
- Cadmium
- Hydrocarbon chloride
- Mercury
- Chromium 6+
- etc.

We merely use pure, recyclable materials for packing our components, such as:

- carton
- cardboard
- adhesive tape made of paper
- polystyrene

We almost completely refrain from using packing materials such as:

- foamed polystyrene (Styropor®)
- adhesive tapes made of plastic
- metal clips

RoHS Compliance

According to the RoHS Directive 2002/95/EC certain hazardous substances like e.g. lead, cadmium, mercury must not be used any longer in electronic equipment as of July 1st, 2006. For the sake of the environment WIMA has refraind from using such substances since years already.

Tape for lead-free WIMA capacitors

DIN EN ISO 14001:2004

WIMA's environmental management has been established in accordance with the guidelines of DIN EN ISO 14001:2004 to optimize the production processes with regard to energy and resources.

Samples and pre-production needs on request.

-WIMA Part Number System

A WIMA part number consists of 18 digits and is composed as follows:

Field 1 - 4: Type description

Field 5 - 6: Rated voltage

Field 7 - 10: Capacitance

Field 11 - 12: Size and PCM

Field 13 - 14: Special features (e.g. Snubber versions)

Field 15: Capacitance tolerance

Field 16: Packing

Field 17 - 18: Lead length (untaped)
