Warning: DO NOT USE THIS PRODUCT IN LIFE SUPPORT SYSTEMS.

LIFE SUPPORT POLICY

ZILOG'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS PRIOR WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF ZILOG CORPORATION.

As used herein

Life support devices or systems are devices which (a) are intended for surgical implant into the body, or (b) support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in a significant injury to the user. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system or to affect its safety or effectiveness.

Revision History

Each instance in the revision history table reflects a change to this document from its previous revision. For more details, refer to the corresponding pages or appropriate links provided in the table below.

Date	Revision Level	Description	Page Number
May 2012	08	Added the NCL-11 and EWA 0.3 GI V2 lens specifica- tions.	<u>33, 35</u>
Nov 2011	07	Added the NCL-3R and NCL-10S lens specifications.	<u>22, 31</u>
Mar 2011	06	Intrusion lens specifications added.	<u>36</u>
Jan 2011	05	Modifications to some lens/sensor descriptions in <u>Table</u> $\underline{2}$.	2
Jan 2011	04	Updated to include two new Nicera sensors.	<u>19, 26</u>
Nov 2010	03	Updated to new Zilog/IXYS logo and accepted Zilog style; replaced all instances of <i>ePIR</i> with <i>advanced passive infrared</i> .	All
Sep 2010	02	Replaced Zilog logos, ePIR with ZMOTION, and Zdots with Module; fixed formatting and pagination issues; removed references to GP and General Purpose.	All
Oct 2010	01	Original issue	All

Overview

Zilog's ZMOTION Detection and Control and Intrusion Detection product families provide integrated and flexible solutions for Passive Infrared (PIR)-based motion detection applications. These product families are based on the ZMOTION MCU, a high-performance microcontroller featuring integrated PIR motion detection algorithms. Each family includes a selection of lenses and PIR sensors to fit a wide range of application requirements. Each lens and sensor combination is optimized for its intended application by configuration settings loaded into the ZMOTION MCU ensuring the best possible performance while significantly reducing development risk and minimizing time to market. Zilog's PIR Motion Detection Technology provides a dramatic improvement in both sensitivity and stability over traditional designs and is scalable to many market segments including Security/Intrusion Detection, Lighting Control, HVAC, Access Control, Vending, Display, Proximity, Power Management, Occupancy Sensing and many others.

This document provides the zone patterns and mechanical dimensions for the Zilog-supported lenses and pyroelectric sensors included in the ZMOTION Family. Each supported lens and pyroelectric sensor combination is provided with an associated configuration file for the ZMOTION MCU. It is possible to use other lenses and pyroelectric sensors not directly supported by Zilog by developing the appropriate configuration settings based on one of the existing files.

There are two general groups of lenses provided:

- ZMOTION Detection and Control for general motion detection applications
- ZMOTION Intrusion Detection for security applications

All lenses and pyroelectric sensors listed in this document are available from Zilog as a bundle (which includes MCU, lens and pyroelectric sensor) or individually from their associated manufacturers. Because Zilog is regularly adding new lens support to these ZMOTION product families, please obtain the latest version of this document from our website at: www.zilog.com/ZMOTION.

PIR Sensor Specifications

The pyroelectric sensors included in the ZMOTION product families are manufactured by Nippon Ceramic Company Ltd. (Nicera). Please refer to their website for any specific information you may require.

Table 1 shows the pyroelectric sensors available for both the ZMOTION Detection and Control and Intrusion Detection Families.

Table 3. ZMOTION Intrusion Detection Lenses and Pyroelectric Sensors (Continued)

Note: *The NCL-11 and EWA 0.3 GI V2 lenses are not currently part of the standard ZMOTION bundled suite or offered in ZMOTION development kits. However, the optimized API settings for this lens are available in the ZMOTION Detection Lens and Pyro Sensor Configuration Guide (WP0018).

ZMOTION Detection and Control Lens Specifications

Figures 1 through 24 on the following pages discuss the specifications of the lenses selected for the ZMOTION Detection and Control family of products. To see specifications for lenses used in security and intrusion detection applications, refer to the <u>ZMO-TION Intrusion Detection Lens Specifications</u> section on page 36.

AA 0.9 GI T1 Lens Specification

The AA 0.9 GI T1 lens array is optimized for dual element pyroelectric sensors in long range sensing applications. It is normally used with the grooved side facing the pyroelectric detector, and curved at a 0.9 inch (22.9 mm) radius about the sensitive area of the detector. The detector position should be 0.492" (12.5 mm) below the upper edge, and centered left-right.

Figure 1. The AA 0.9 GI T1 Lens Specification

CM 0.77 GI V3 Lens Specification

The CM 0.77 GI V3 lens array is intended for ceiling mounted applications and is optimized for use with both dual and quad element pyroelectric sensors. The detector mounting flange should be 0.46" (11.7 mm) from the pyroelectric sensors element. The angle from the center line to the placement notch is 15 degrees.

9

CM 0.77 GI V5 Lens Specification

The CM 0.77 GI V5 lens array is intended for ceiling mounted applications and is optimized for both dual and quad element pyroelectric detectors. The detector mounting flange should be 0.46" (11.7 mm) from the pyroelectric sensors element.

Figure 5. The CM 0.77 GI V3 Lens Specification, #2 of 3

Figure 6. The CM 0.77 GI V3 Lens Specification, #3 of 3

CWM 0.5 GI V1 Lens Specification

The CWM 0.5 GI V1 lens array is intended for both wall and ceiling mounted applications and is optimized for both dual and quad element pyroelectric detectors. The lens is intended to clip directly into the circuit board over top of the pyroelectric sensor.

Figure 8. The CM 0.5 GI V1 Lens Specification: Ceiling Mount, #1 of 2

Figure 9. The CM 0.5 GI V1 Lens Specification: Ceiling Mount, #2 of 2

NCL-9(26) Lens Specification

The NCL-9(26) lens is intended for ceiling mounted and other general purpose motion sensing applications. It is optimized for both dual and quad element pyroelectric sensors.

Sensor: Pyro-electric Infrared Sensor, Dual Element Type

Element Size: 2.0mm (X) x 1.0mm (Y) x Gap1.0mm

Unit [m]

Figure 11. The NCL-9(26) Lens Specification, #2 of 3

Sensor: Pyro-electric Infrared Sensor, Quad Element Type (One output) Element Size: 0.75mm (X) x 0.75mm (Y) x Gap0.7mm

Unit [m]

Figure 12. The NCL-9(26) Lens Specification, #3 of 3

NCL-3B Lens Specification

The NCL-3B lens is intended for wall-mounted entrance and proximity-sensing applications.

Figure 19. The NCL-3R Quad Element Lens Specification, Tab Direction A, X Axis

NCL-10IL Lens Specification

The NCL-10IL lens is intended for wall-mounted entrance and proximity-sensing applications. This lens features two orientations, Tab A and Tab B, that can be used with the pyroelectric sensor to provide different beam patterns. Refer to Figures 21 and 22 for the Tab A beam patterns and to Figures 23 and 24 for the Tab B beam patterns.

Figure 23. The NCL-10IL Lens Specification, Tab Direction B, X Axis

Figure 24. The NCL-10IL Lens Specification, Tab Direction B, Y Axis

NCL-10S Lens Specification

The NCL-10S lens is intended for wall-mounted entrance detection applications wherein directional recognition is required. See Figures 25 and 26.

Figure 25. The NCL-10S Lens Specification, Dimensions

Figure 26. The NCL-10S Dual Element Lens Specification, X/Y Axes

NCL-11 Lens Specification

The NCL-11 lens is intended for wall-mounted room occupancy and proximity sensing applications with 32 detection zones. See Figures 27 and 28.

Tolerance without instruction : (+/-) 0.2 Unit [mm]

*16 zones × dual element = 32 areas

- Element Size: 1.0mm (X) x 2.0mm (Y) x Gap1.0mm

Figure 28. The NCL-11 Detection Area, X/Y Axes

EWA 0.3 GI V2 Lens Specification

The EWA 0.3 GI V2 lens is intended for wall-mounted room occupancy and proximity sensing applications in which an extra-wide sensing angle is required. See Figure 29.

ZMOTION Intrusion Detection Lens Specifications

Figures 30 through 32 provide the zone patterns and mechanical dimensions for the ZMO-TION Intrusion Detection family of products. Recommended placement of the pyroelectric sensor is provided with the detector and lens inclined downward at an angle of 12 degrees. If you wish to use a tilt angle other than 12 degrees while maintaining the specified zone patterns, move the pyroelectric sensor up by 0.021" (0.53 mm) for each degree less than 12 degrees, or down by the same amount for each degree greater than 12 degrees.

The WA 1.2 GI 12 V4, LR 1.2 GI 12 V3 and VB 1.2 GI V1 lenses can be interchanged in the same end product without modifications to the placement or angle of the lens.

These lenses may also be used in nonintrusion applications. For additional lenses that do not require security/intrusion detection capabilities, refer to the <u>ZMOTION Detection and</u> <u>Control Lens Specifications</u> section on page 6.

WA 1.2 GI 12 V4 Lens Specification

The WA 1.2 GI 12 V4 lens array is optimized for dual-element pyroelectric sensors in large-area security applications. It is normally used with the grooved side facing the pyroelectric detector, and curved at a 1.2 inch (30.5 mm) radius about the sensitive area of the detector. The detector and the lens array should be inclined downward at an angle of 12 degrees. If you wish to use a tilt angle other than 12 degrees while maintaining the specified zone pattern, move the pyroelectric sensor up by 0.021" (0.53 mm) for each degree less than 12 degrees, or down by the same amount for each degree greater than 12 degrees. The detector position should be 0.812" (20.6 mm) below the upper edge, and centered left-to-right.

Figure 30. WA 1.2 GI 12 V4 Lens Specification

LR 1.2 GI 12 V3 Lens Specification

The LR 1.2 GI 12 V3 lens array is optimized for dual-element pyroelectric sensors in long-range corridor security applications. It is normally used with the grooved side facing the pyroelectric detector, and curved at a 1.2 inch (30.5 mm) radius about the sensitive area of the detector. The detector and the lens array should be inclined downward at an angle of 12 degrees. If you wish to use a tilt angle other than 12 degrees while maintaining the specified zone pattern, move the pyroelectric sensor up by 0.021" (0.53 mm) for each degree less than 12 degrees, or down by the same amount for each degree greater than 12 degrees. The detector position should be 0.812" (20.6 mm) below the upper edge, and centered left-to-right.

Figure 31. LR 1.2 GI 12 V3 Lens Specification

VB 1.2 GI V1 Lens Specification

The VB 1.2 GI V1 lens array is optimized for dual-element pyroelectric sensors in vertical barrier or curtain-type security applications. It is normally used with the grooved side facing the pyroelectric detector, and curved at a 1.2 inch (30.5 mm) radius about the sensitive area of the detector. The detector and the lens array should be inclined downward at an angle of 12 degrees. If you wish to use a tilt angle other than 12 degrees while maintaining the specified zone pattern, move the pyroelectric sensor up by 0.021" (0.53mm) for each degree less than 12 degrees, or down by the same amount for each degree greater than 12 degrees. The detector position should be 0.812" (20.6 mm) below the upper edge, and centered left-to-right.
